SFST REFRESHER TRAINING COURSE

Instructor Manual
And
Facilitator’s Guide
PREFACE

The Facilitator's Guide provides an introduction and overview of the SFST Refresher Training Program. The SFST Refresher Training Program is available as a CD-ROM program and as an Instructor-led program. This Facilitator's guide will describe both formats.

BOTH THE CD-ROM AND THE INSTRUCTOR-LED SFST REFRESHER TRAINING PROGRAMS ARE INTENDED FOR THE PURPOSES OF REFRESHER TRAINING ONLY. THESE PROGRAMS ARE NOT A SUBSTITUTE FOR NHTSA/IACP APPROVED DWI DETECTION AND STANDARDIZED FIELD SOBRIETY TESTING TRAINING.

The SFST Refresher Training Program focuses on enforcement of alcohol impaired driving. Other programs have been designed to improve police officers' skills in detecting and apprehending drug impaired drivers, including a four-hour module, "Introduction to Drugs That Impair" and an eight-hour module, "Drugs That Impair Driving." These are available from the National Highway Traffic Safety Administration (NHTSA).

For more information regarding other materials and programs, contact your State Office of Highway Safety or your NHTSA Regional Training Coordinator (See Appendices D & E).

PURPOSE OF THIS DOCUMENT

The Facilitator's Guide is intended to facilitate planning and implementation of the SFST Refresher Training Program. The guide provides a general overview of the sequence of instruction for the SFST Refresher Training Program. This guide also provides specific information on how to use the CD-ROM program as well as an outline of the Instructor-led course materials.

This guide is a tool to be used by a facilitator overseeing students working individually with the CD-ROM program or by an instructor leading a group of students in a classroom setting.

OVERVIEW OF THE COURSE

- **Intended Audience**

  SFST Refresher Training is for law enforcement officers at the Federal, state, county and local level who have already taken and **successfully completed** the NHTSA and IACP approved DWI Detection and Standardized Field Sobriety Testing Training Program.

- **Purpose of the Training**

  The primary purpose the SFST Refresher Training Program is to improve the overall consistency of how the SFST test battery is administered by individual police officers. Officers can refresh their skills at:

  - recognizing and interpreting evidence of DWI;
  - administering and interpreting the scientifically validated sobriety tests; and
  - describing DWI evidence clearly and convincingly.

  The refresher training also provides officers with information regarding recent case law and research studies.

- **Course Content**

  The SFST Refresher Training Program has 6 content units. Each unit has an introduction, several topics, and an activity. The following is a description of the topics and content covered in each unit:
Unit 1: Phase 1-2: Vehicle in Motion and Personal Contact

Description

This unit is a review of the first two phases of Standardized Field Sobriety Testing. Phase 1, Vehicle in Motion, covers the officer's initial observations of vehicular operation, the decision to stop, and observation of the stop. Phase 2, Personal Contact, covers the face-to-face observation and interview of the driver while still in the vehicle and the decision to instruct the driver to exit the vehicle. This unit also describes how officers can use the DWI Investigation Fields Note Form to document important evidence collected during Phase 1 and Phase 2.

Visuals

The visuals in Unit 1 include a combination of still images and video. The video is used to illustrate the driving cues of impairment. Each of the five driving cues presented has an accompanying video clip of a driver exhibiting the cues.

Activities

Activity #1: Watch a short video clip and see if you can identify the driving cue that indicates that the driver may be impaired. Select one choice that describes the most obvious driving cue of impairment. (A video clip shows a vehicle turning onto a one way street.)

1. Failure to signal or signaling that is inconsistent with action
2. Turning with a wide radius
3. Driving the wrong way on a one way street
4. Accelerating or decelerating for no apparent reason

Activity #2: What is the major decision an officer must make during Phase Two?

1. Whether to stop the vehicle
2. Whether to arrest the driver
3. Whether to request the driver to exit the vehicle
4. Whether to administer SFST

Unit 2: Phase 3: Pre-Arrest Screening

Description

This unit covers the pre-arrest screening phase of Standardized Field Sobriety Testing. The first topic covers the administration and interpretation of the Horizontal Gaze Nystagmus test. The second topic covers the administration and interpretation of the two validated divided attention tests: the Walk-and-Turn and the One-Leg Stand.
**Visuals**

Unit 2 visuals include still images, graphics, and video. Video clips are used to demonstrate how to administer the Horizontal Gaze Nystagmus, Walk-and-Turn, and One-Leg Stand tests.

**Activities**

*Activity #1:* After watching a video of an officer administering a Horizontal Gaze Nystagmus test, you will be asked to identify the clues exhibited by the subject. (A video clip shows a subject exhibiting all six clues of nystagmus. The student answers the question by selecting the appropriate boxes on the DWI Investigation Fields Note form.)

1. Lack of smooth pursuit (both eyes)
2. Distinct nystagmus at maximum deviation (both eyes)
3. Onset of nystagmus prior to 45 degrees (both eyes)

*Activity #2:* Instructions Stage stance for the Walk-and-Turn test should be:

1. Right foot 9 inches in front of the left; arms down at their sides.
2. **Heel-to-toe; right foot in front of left foot; arms down at their sides.**
3. Feet together; arms straight out from their sides.
4. **Heel-to-toe, right foot in front of left; arms straight out from their sides.**

During the Walking Stage of the Walk-and-Turn test, the suspect should:

1. Take ten steps down the line counting their steps out loud; turn; take ten steps back counting backwards from ten.
2. Take ten heel-to-toe steps down the line; turn; count to ten; take ten heel-to-toe steps back.
3. Take nine steps down the line with feet ten inches apart; turn; take nine steps back with feet ten inches apart.
4. **Take nine heel-to-toe steps down the line; turn; take nine heel-to-toe steps back counting their steps out loud.**

**Unit 3: Interpretation of Evidence/Making the Arrest Decision**

**Description**

This unit is a review of how an officer decides to make an arrest following the administration and interpretation of the SFST test battery. This unit also covers some of the reasons for inconsistent blood alcohol concentrations (BAC) and options for dealing with inconsistent BAC.
Visuals

The visuals for this unit include several still images.

Activity

From this list, select all of the drugs that cause HGN.

1. Inhalants
2. Marijuana
3. PCP
4. CNS stimulants
5. Hallucinogens
6. CNS depressants

Unit 4: Field Notes

Description

This unit describes the purpose of taking descriptive field notes and provides some guidelines and examples for taking clear, concise notes. This unit also reviews the DWI Investigation Field Notes form with a description of each section.

Visuals

The visuals for this unit include several still images and a graphic of the DWI Investigation Field Notes form. This unit also uses a video clip for the activity.

Activity

See if you can choose the best way to describe an incident. Select one choice that best describes the incident. (A video clip shows a vehicle failing to stop at a stop sign and turning where a child is crossing in a crosswalk.)

1. Driver made an illegal turn in a school zone
2. Driver did not slow down for child in cross walk
3. Vehicle made a jerky stop at a stop sign
4. **Vehicle jerked to slow down; failed to stop at stop sign; turned with disregard for child in crosswalk**
Unit 5: Testimony and Pre-Trial Preparation

Description

This unit looks at how to prepare for trial and guidelines for testimony, including presenting the facts, do's and don'ts, and professional conduct.

Visuals

The visuals for this unit include several still images.

Activity

Select all the appropriate actions an officer should take when preparing for testimony.

1. Review the case file
2. Discuss details of the case with the defense attorney
3. Compile complete and accurate notes
4. Call the suspect's immediate family
5. Discuss the case with other officers involved
6. Mentally organize the elements of the case

Unit 6: New Developments

Description

This unit highlights some of the new developments in the research, administration, and interpretation of the SFSTs. Topics covered include state case law on HGN and validation research. This unit also provides an overview of the four-hour training module entitled "Introduction to Drugged Driving" and the eight-hour module "Drugs that Impair Driving" as well as a description of the Drug Evaluation and Classification program.

Visuals

The visuals for this unit include graphics and several still images.

Activity

In the Florida Validation Study, it was found that an officer's decision to arrest is correct what percentage of the time?

1. 45%
2. 65%
3. 75%
4. 95%
• **Length of the Training**

**Instructor-led**

The classroom-based, instructor-led program is designed as a one-day course. The content alone will take approximately 5 ¾ hours to cover. This time may vary depending upon each individual instructor, the number of students in the class, and the number and length of breaks.

**CD-ROM**

The estimated contact time for the CD-ROM program is 2 ¾ hours. (Contact time refers to the amount of time a typical student would require to view all of the content screens, complete the exercises and take the tests. It does not include the amount of time required to read all of the reference documents on the CD, or to review material a second or third time.) This estimate is based on a student working at an individual pace. If the CD-ROM is being used in a classroom setting, the length of time will depend upon the instructor but should take no longer than 8 hours.

• **CD-ROM vs. Instructor-led**

The content for both SFST Refresher Training programs is identical. The selection of a format should be based on your facility’s available equipment, the availability of an instructor, and the availability of the officers to be trained. While each format has advantages, instructors can choose a format that is best suited to their specific needs.

**CD-ROM Training**

The CD-ROM program allows for greater flexibility and can be used on a wide range of desktop and notebook computers (see ‘Installation Instructions’ for the minimum system requirements). The CD-ROM format is designed to be used by individual officers sitting at a personal computer. Because of the portability of a CD-ROM, officers who are unable to take time away from their duties or to travel great distances to be part of a classroom can still complete the training.

Consider using the CD-ROM program if you:

1. have the equipment,
2. do not have a qualified instructor,
3. have remotely located officers to be trained, or
4. are unable to establish an optimal date to bring a class together.
Instructor-led Training

The instructor-led course is designed to be used by an Instructor in a classroom setting. The equipment requirements are different than the CD-ROM program (see 'Visual Aids').

Consider using the Instructor-led program if you:

1. do not have the appropriate equipment,
2. prefer the classroom-based, instructor-led atmosphere, or
3. have a large group of officers to be trained at one time.

HOW TO USE THE CD-ROM

The SFST Refresher Training CD-ROM contains two programs: SFST Refresher Training for Law Enforcement Officers (referred to in this document) and an Overview for Prosecutors. The Overview for Prosecutors is designed for prosecutors to learn more about how officers are trained in the use of the SFST test battery (see Appendix C for an outline of the prosecutor program). Both of these programs are accessed through the same installation and start up routine. When a user starts the CD, they are prompted to select one of the two programs.

- Installation Instructions

Before beginning the installation, be sure that the computer to be used meets the minimum system requirements.

Minimum System Requirements:

- Windows 95/98/NT
- Pentium 133 MHz or equivalent
- 20 MB free hard drive space
- 16MB RAM
- 4x CD-ROM
- Sound card and speakers
- Monitor: 800 x 600 resolution; High Color (16bit)

Note: To use the web links found throughout the program, a connection to the internet must be active.
To Install the CD

Insert the SFST Refresher Training CD into the CD-ROM drive.

1. The SFST Install application should appear.
2. Follow the on-screen instructions to complete the installation.
   Note: The installation will automatically set up QuickTime® 4.0 and Adobe Acrobat® Reader.
3. To start the program, click the START button, select PROGRAMS, and then select SFST - An Interactive Guide.
4. Make sure to keep the CD in the CD-ROM drive.

Troubleshooting

If the SFST Install application does not appear automatically, you can install the program manually.

1. Make sure the SFST Refresher Training CD is in the CD-ROM drive.
2. Click the START button, then select RUN.
3. Click the BROWSE button, use the drop down menu to locate your CD drive.
4. Select SETUP.EXE from the list in the window and click OPEN.
5. Click OK to start the installation.
6. Follow the on-screen instructions to complete the installation.
   Note: The installation will automatically set up QuickTime® 4.0 and Adobe Acrobat® Reader.
7. To start the program, click the START button, select PROGRAMS, and then select SFST - An Interactive Guide.
8. Make sure to keep the SFST CD in the CD drive.

• Student Log In

Once the program has been installed and started (see “Installation Instructions”), an officer begins by logging in. The log in information is recorded on the officer's final report (see “Student Tracking and Management”).

The first screen in the log in process has fields for entering:

- First Name,
- Last Name,
- Unit, Department or Agency, and
- Badge/ID Number

Using the keyboard to enter the information and the tab key to move from field to field, the officer must supply the requested information. If the information is not entered, a message is displayed informing the officer that the information is required to proceed.
The next screen in the log in is a disclaimer reminding the officer that this program is intended for refresher training only and not a substitute for DWI Detection and Standardized Field Sobriety Testing training.

The last screen in the log in process has fields for entering answers to the following questions:

1. When did you attend (and successfully complete) the NHTSA/IACP approved DWI Detection and Standardized Field Sobriety Testing training?
2. How long was the training?
3. How much experience do you have administering the SFST battery? (number of arrests using the battery)

Finally, the student is instructed to insert a floppy disk into the computer (unless one has been previously inserted). The floppy disk is necessary because when the student exits the program, all of the above information along with scores on the pretest and final test are written to the floppy disk.

• Navigation Buttons

The navigation buttons are clickable areas on the screen that enable the student to go to a different part of the course. The operation of these navigation buttons is described below.

Next

This button allows the student to proceed to the next screen. The Next button is not available when the student must respond to an instruction that requires an interaction. In this situation, the button does not highlight when rolled over and nothing happens if it is selected. At the end of a lesson, the Next button takes the student to the appropriate unit menu to select another lesson.

Back

This button allows the student to go back to the previous screen. If the student is at the beginning of a lesson, the Back button will not highlight when rolled over and nothing happens if it is selected.

Menu

The Menu button will return the student to either the Unit Menu or the Main Menu depending upon where they are in the program. This button is always active.
**Quit**

The Quit button will open a dialog box that reads, "Click OK to exit or Cancel to return to the program." If the student clicks OK they are exited out of the program. If the student clicks Cancel, the dialog box goes away and they remain on the current screen.

**Help**

Selecting the Help button opens the course tutorial. This is the same tutorial that is provided during the course introduction. The tutorial is an overview of how each of the navigation features and tools operate. When the student rolls the mouse over each item on the screen, a pop-up text box appears that explains what the item does and how it operates. When the student clicks on the Close button the tutorial goes away and they return to where they left off.

**Tools**

Along with the navigation buttons, the course interface has a button labeled "Tools". When the student clicks on the Tools button, a list animates up from the button.

The following tools are available throughout the program:

**Glossary**

The Glossary is an on-line dictionary of the technical terms used in the program. When the student clicks on the Glossary from the Tools Menu, the Glossary will appear. The Glossary screen contains three boxes – one for an alphabet that allows the student to select a letter, one with a list of terms that begin with the currently highlighted letter, and one for the definition. The student can select a letter to see a list of words that begin with that letter and then select a term from the list to see the definition.

Throughout the program, terms that are found in the glossary are highlighted in red (only once per screen). The student can click on the term and the glossary will appear with the definition to that term displayed.

The student clicks on the Close button to exit the glossary and return to where they left off.

**Take Notes**

When the student clicks on Take Notes from the Tools Menu, a blank text box will appear. The student can type directly into this box. The student clicks on the Close button to exit this screen and return to where they left off.
References

When the student selects References from the Tools Menu, a screen showing reference documents is displayed. This screen also lists contact information and web site links. There is also an option to select Field Notes Form. When the Fields Note Form or the contact information is selected, Adobe Reader will be launched (the software for this tool is installed during the installation routine) and the document will be opened. The student can scroll through the document and print all or part of it. When the student is finished with the document, they can close the Adobe Reader window by clicking on the 'X' in the upper right hand corner of the window. If the student's workstation is connected to the internet, selecting a web site link will take them to the appropriate site. Clicking on the 'X' in the upper right hand corner will return the student to the reference screen.

The student clicks on OK to close the References screen and return to where they left off.

Bookmark

This option allows the student to create, modify and delete a bookmark for any screen in the program. When the Bookmark option is selected, a window will appear that shows the current list of bookmarks that have been set by the student. Buttons along the bottom of the window allow the student to “Edit Bookmark”, “Delete” a bookmark, “Add” a bookmark for the current screen, or “Clear All” current bookmarks. A small text field is enabled when the student selects either “Add” or “Edit Bookmark”. The student types the new or modified name in this field. To go to a specific bookmark on the list, the student highlights a bookmark name and clicks on “Go To”. Once at a bookmark, the student may go back to the original location in the program by clicking on Bookmark from the Tools Menu and selecting “Back”.

Print

When the student selects “Print” from the Tools Menu a dialog boxed is displayed that reads “Click OK to print the current screen or Cancel if you changed your mind.” If the student selects OK (and the workstation is connected to a printer) the current screen display is printed. If the student selects Cancel, the dialog box goes away and they remain on the current screen.

· Student Tracking and Management

To begin the program, law enforcement officers are required to insert a floppy disk into the computer. A Word file is created on the floppy disk using the student’s last name as the file name (i.e., Smith.doc).
The following information is recorded in the student file:

- Date
- Time
- Information recorded during log in (name, badge number, experience, etc.)
- Response to the disclaimer (agree or disagree)
- Pretest score (percentage correct and number or missed questions)
- Final Test score (percentage correct and number or missed questions)

An officer can take the pretest and final test as often as they like; the program will record all subsequent scores and list them by time. **Note:** If a student has taken one or both of the tests, exits the program, and returns at a later time it is advised that the student use a second floppy disk or add a number to their last name (for instance, ‘Smith’ and then ‘Smith2’). This will prevent the records from the first visit from being overwritten.

The training officer or system administrator can access the data from the student’s floppy disk and print out a report if desired. For purposes of course management, the student’s data can be exported into a database or spreadsheet.

**INSTRUCTOR-LED COURSE MATERIALS**

The course materials for the Instructor-led SFST Refresher Training Program consist of the following documents and materials:

- Instructor's Lesson Plans Manual
- Visual Aids
- Student Manual

**Instructor's Lesson Plans Manual**

The Instructor's Lesson Plans Manual is a complete and detailed blueprint of what the course covers and how it is to be taught. It is organized into 6 units corresponding to the six units on the CD-ROM. Each unit consists of a cover page, an outline page, the lesson plans, a paper copy of the visual aids ("slides"), and any other related material referenced in the unit.

- The **cover page** presents the unit's title and the total instructional time required to complete the unit.

- The **outline page** lists the content segments and principal types of learning activities that take place during the unit.
The lesson plans are arranged in a three-column format.

1. The left column contains the training aides (i.e., time frames and visual aides, etc.)
2. The center column contains the content (i.e., an outline of what is to be taught)
3. The right column contains Instructor Notes. These notes provide guidance concerning how the content is to be taught. For example, the instructor notes might include the approximate amount of time to be devoted to a particular topic and/or points requiring special emphasis.

In addition to the content for each of the 6 units, the Instructor's Lesson Plans Manual includes the following:

- Glossary
- DWI Investigation Field Notes Form
- Pretest
- Final Test
- Case Law
- Validation Research Studies
- State Offices of Highway Safety
- NHTSA Regional Offices

The Instructor's Lesson Plans Manual is designed to prepare the instructor to teach the course. Instructors should review the entire set of lesson plans to become familiar with the content and develop a clear understanding of the course flow. Instructors are expected to gather and be prepared to operate any equipment necessary (i.e., projection screen, computer with PowerPoint software, VCR). Instructors should also have all student manuals and handouts (i.e., pretest and final test) prepared before class begins.

Instructors should use the lesson plans as a tool for helping to maintain the sequence and pace of presentations and other learning activities. The Instructor's Lesson Plans Manual is not a script and should not be read verbatim to the students.

**Visual Aids**

The instructor-led program uses two types of visual aids:

- PowerPoint presentations
- Videotape

The PowerPoint presentation that accompanies the instructor-led course has the same look and feel as the CD-ROM program including the graphics and embedded video. The PowerPoint presentation is used to emphasize key points and support the instructor's presentation. Instructors should use this presentation when a computer and/or projection system is available for use.
If a computer is not available to display the PowerPoint presentation, instructors can use the print-ready format. This is a black and white, paper version of the PowerPoint presentation (found in the Instructor's Lesson Plans Manual) that can be printed as handouts or transparencies. A videotape which includes all of the video clips used in the program can be used to accompany this version of the presentation.

In addition to the PowerPoint presentation and the videotape, the instructor should feel free to use any available chalkboard or flipchart paper to add emphasis to a presentation.

- **Student Manual**

  The SFST Refresher Training Student Manual serves as a reference guide for the student. Each student should receive a manual that includes:

  - Training Objectives
  - Glossary
  - DWI Investigation Field Notes Form
  - Pretest
  - Summary of the content for each unit
  - IACP Standards
  - Validation Research Studies
  - State Offices of Highway Safety
  - NHTSA Regional Offices

**TESTING**

- **Description of Pretest and Final Test**

  Both the CD-ROM and the Instructor-led programs have a 15-question, multiple-choice pretest and a 15-question, multiple-choice final test. In the CD-ROM program, students access the tests by selecting the appropriate choice from the Main Menu. For the Instructor-led program, the test is handed out and taken in a paper-based, written format. The questions for the pretest and the final test are identical in the CD-ROM and Instructor-led courses and are adapted from the DWI Detection and Standardized Field Sobriety Testing Training Program.

- **Pretest Questions**

  Following are the 15 questions that make up the Pretest. The correct answers are shown in bold.
Glossary

**Alveolar Breath** - Breath from the deepest part of the lung.

**Blood Alcohol Concentration (BAC)** - Grams of alcohol found in 100 milliliters of blood.

**Breath Alcohol Concentration (BrAC)** - Grams of alcohol found in 210 liters of breath.

**Clue** - Something that leads to the solution of a problem.

**Cue** - A reminder or prompting as a signal to do something. A suggestion or a hint.

**Divided Attention Test** - A test that requires the subject to concentrate on both mental and physical tasks at the same time.

**DWI** - **Driving While Intoxicated**. (Also Driving While Impaired) Driving a vehicle while under the influence of alcohol or other drugs.

**DWI Detection Process** - The entire process of identifying and gathering evidence to determine whether or not a suspect should be arrested for a DWI violation.

The DWI detection process has three phases:
- Phase 1 – Vehicle in Motion,
- Phase 2 – Personal Contact,
- Phase 3 – Pre-arrest Screening

**Evidence** - A means by which an alleged fact may either be established or disproved.

Evidence of a DWI violation may be of various types:
- Physical (or real) evidence: something tangible, visible, or audible.
- Well established facts (judicial notice)
- Demonstrative evidence: demonstrations performed in a courtroom
- Written matter or documentation
- Testimony

**Field Sobriety Test** - Any one of several roadside tests that can be used to determine whether a suspect is impaired.

**Horizontal Gaze Nystagmus (HGN)** - A standardized field sobriety test based on the involuntary jerking of the eyes as they gaze toward the side.

**Illegal Per Se** - Unlawful in and of itself. Used to describe a law that makes it illegal to drive while having a statutorily prohibited Blood Alcohol Concentration.
Nystagmus - An involuntary jerking of the eyes.

One-leg Stand (OLS) - A standardized divided attention field sobriety test.

Personal Contact - The second phase in the DWI detection process. In this phase the officer observes and interviews the driver face to face; determines whether to ask the driver to step from the vehicle; and observes the driver's exit and walk from the vehicle.

Pre-Arrest Screening - The third phase in the DWI detection process. In this phase the officer administers standardized field sobriety tests to determine whether there is probable cause to arrest the driver for DWI, and administers or arranges for a preliminary breath test.

Preliminary Breath Test (PBT) - A pre-arrest breath test administered during investigation of a possible DWI violation to obtain an indication of the person’s blood alcohol concentration.

Psychophysical “Mind body” - Used to describe field sobriety tests that measure a person’s ability to perform both mental and physical tasks at the same time.

Standardized Field Sobriety Test Battery - A battery of three tests, Horizontal Gaze Nystagmus, Walk-and-Turn, and One-Leg Stand, administered and evaluated in a standardized manner to obtain validated indicators of impairment based on NHTSA research.

Tidal Breath - Breath from the upper part of the lungs and mouth.

Vehicle in Motion - The first phase in the DWI detection process. In this phase the officer observes the vehicle in operation, determines whether to stop the vehicle, and observes the stopping sequence.

Vertical Gaze Nystagmus - The involuntary jerking of the eyes occurring as the eyes gaze upward.

Walk-and-Turn (WAT) - A standardized divided attention field sobriety test.

APPENDIX C
Overview for Prosecutors Program (CD-ROM only)
Overview for Prosecutors Program (CD-ROM only)

The SFST Overview for Prosecutors is designed for prosecutors who want to become more familiar with SFST. The program also gives prosecutors a better understanding of how law enforcement officers are trained to carry out the laws that pertain to DWI. This program is accessed by installing the SFST Refresher Training CD-ROM and selecting Overview for Prosecutors when the startup routine prompts the user to select a program. The program includes an introduction and five units.

Unit 1: What is the SFST Program and How did it Originate?

This unit provides some background information and describes the purpose of the SFST program.

Topics include:

- Introduction
- Development of SFST Program
- Validation of SFSTs

Unit 2: How are Police Officers Trained?

This unit provides a summary of the training that law enforcement officers receive.

Topics include:

- Introduction
- Summary of Training
- Periodic Updates

Unit 3: How does the Officer Make the Decision to Arrest?

This unit describes how an officer makes the decision to arrest including an overview of the 3 phases of detection.

Topics include:

- Introduction
- Three Phases of Detection
- Interpretation of Evidence
Unit 4: The SFST Battery

This unit has a description of the SFST battery, including administration of the tests and interpretation of the results.

Topics include:

• Introduction
• Horizontal Gaze Nystagmus
• Walk-and-Turn
• One-Leg Stand
• Other Tests
• Inconsistent BAC
• Questions to Ask the Officer

Unit 5: How Can I Learn More About SFSTs?

This unit provides information on how to learn more about the SFST program.

Topics include:

• Introduction
• Attending SFST Training
• National Traffic Law Center

OVERVIEW

- Course Description

The SFST Refresher Training Program is for law enforcement officers who have previously completed the National Highway Traffic Safety Administration and International Association of Chiefs of Police approved Standardized Field Sobriety Testing training. The purpose of the refresher training is to review the administration and interpretation of the SFST battery. The goal of the program is to improve the overall consistency of how the SFST test battery is administered by individual police officers.

The program allows officers to refresh their skills at recognizing and interpreting evidence of DWI; administering and interpreting the scientifically validated sobriety tests; and describing DWI evidence clearly and convincingly. The program provides a review of note-taking procedures and the trial preparation and testimony process. It also provides updated information regarding recent case law and research studies.

THIS PROGRAM IS INTENDED FOR THE PURPOSES OF REFRESHER TRAINING ONLY. THIS PROGRAM IS NOT A SUBSTITUTE FOR NHTSA/IACP APPROVED DWI DETECTION AND STANDARDIZED FIELD SOBRIETY TESTING TRAINING.

- How to Use this Manual

This manual is a complete guide to the SFST Refresher Training Program and how it is to be taught. It is organized into 6 units corresponding to the six units on the CD-ROM. Each unit consists of a cover page, an outline page, the lesson plans, and master (paper) copies of the visual aids ("slides") referenced in the lesson plans.

- The cover page presents the unit's title and the total instructional time required to complete the unit.

- The outline page lists the content segments and the principal types of learning activities that take place during the unit.

- The lesson plans are arranged in a three-column format.
  1. The left column contains the training aides (i.e., time frames and visual aides, etc.)
  2. The center column contains the content (i.e., an outline of what is to be taught)
  3. The right column contains Instructor Notes. These notes provide guidance concerning how the content is to be taught. For example, the instructor notes might include the approximate amount of time to be devoted to a particular topic and/or points requiring special emphasis.
• **Note to Instructors**

The Instructor's Lesson Plans Manual is designed to prepare you to teach the SFST Refresher Training Program. You should review the entire set of lesson plans to become familiar with the content and develop a clear understanding of the course flow. Instructors are expected to gather and be prepared to operate any equipment necessary (i.e., projection screen, computer with PowerPoint software, VCR). You should also have all student manuals and handouts (i.e., pretest and final test) prepared before class begins.

The Instructor's Lesson Plans Manual is a tool to help you maintain the sequence and pace of presentations and other learning activities. This manual is not a script and should not be read verbatim to the students.

Lesson Plan

- IACP Standards for the SFST Program
  1. IACP adopted several standards specifying the requirement for selection and training of SFST practitioners and SFST instructors
     - Criteria which must be met prior to completion of the program
     - Knowledge and skills necessary for an individual to be considered for the program

- Pretest

  10 Minutes

- Purpose of Pretest
  1. Distribute pretests.
  2. Collect completed pretests.

Instructor Notes

Refer students to the IACP Standards in their Student Manual. Discuss the standards. (See Attachment A)

Explain that the purpose of the pretest is to provide a basis for evaluating students' knowledge gain during the training.

There is a copy of the pretest in each student's manual. You may also choose to copy the pretest from the attachment and distribute. Allow students approximately 10 minutes to complete the pretest and collect.
ATTACHMENTS

A. IACP Standards
B. SFST Refresher Training Pretest
ATTACHMENT A

IACP STANDARDS

1. A person shall be employed and under the direct control of a public criminal justice agency or institution involved in providing training services to law enforcement agencies.

2. SFST students shall successfully complete an approved classroom training course that shall, at a minimum, achieve the learning objectives as stated in the IACP-approved training curriculum.

3. Only persons who have successfully completed the NHTSA/IACP-approved DWI Detection and Standardized Field Sobriety Testing basic training program are eligible to be SFST instructors.

4. Instructor trainers must have successfully completed the SFST Basic School and the SFST Instructor Development School or an equivalent approved instructor development training course. They must be thoroughly familiar with the SFST student and instructor manuals.
Introduction

- Introduction
- Origin of Training
- IACP Standards for the SFST Program
Introduction

- Recognize and interpret evidence of DWI violations.

- Administer and interpret standardized field sobriety tests.

- Describe DWI evidence clearly and convincingly.
Introduction

- The objectives of this program include:
  
  - Review the administration and interpretation of the SFST battery.
  
  - Review note taking procedures.
  
  - Review the trial preparation and testimony process.
  
  - Provide updated information on the SFST program and related case law.
Origin of Training

- Research began in 1975 to test the validity of field sobriety testing

- Results indicated that, when administered in a standardized fashion, the SFSTs are accurate indicators of impairment

- In 1984, a training program was developed by NHTSA, in cooperation with IACP, to better prepare police officers to administer and interpret SFSTs
IACP Standards for the SFST Program

- IACP adopted several standards specifying the requirement for selection and training of SFST practitioners and SFST instructor

  - Criteria which must be met prior to completion of the program

  - Knowledge and skills necessary for an individual to be considered for the program

<td></td>
<td>• Phase 1 - Vehicle in Motion</td>
<td>This unit will cover the first two phases of Standardized Field Sobriety Testing. Phase 1, Vehicle in Motion, covers the officer's initial observations of vehicular operation, the decision to stop, and observation of the stop. Phase 2, Personal Contact, covers the face-to-face observation and interview of the driver while still in the vehicle and the decision to instruct the driver to exit the vehicle. This unit also describes how officers can use the Standard Note-Taking Guide to document important evidence collected during Phase 1 and Phase 2.</td>

### Aides

- **Judgement Problems**
  1. Following too closely
  2. Improper or unsafe lane changes
  3. Illegal or improper turn
  4. Driving on other than the designated roadway
  5. Stopping inappropriately in response to the officer
  6. Inappropriate or unusual behavior
  7. Appeared to be impaired

- **Post Stop Cues**
  1. Difficulty with motor vehicle controls
  2. Difficulty with exiting the vehicle
  3. Fumbling with the driver's license or registration
  4. Repeating questions or comments
  5. Swaying, unsteady, or balance problems
  6. Leaning on the vehicle or other object
  7. Slurred speech
  8. Slow to respond to officer or requiring the officer to repeat
  9. Providing incorrect information or changing answers
  10. Odor of alcoholic beverage from the driver

- **Taking Notes During Phase 1**

Unit 1
Law Enforcement
SFST Refresher Training

Introduction

- Phase 1: Vehicle in Motion
- Phase 2: Personal Contact
- Standard Note-Taking Guide
Phase 1: Vehicle in Motion

- Observe vehicle or driver
- Initial suspicion of DWI
Phase 1 - Vehicle in Motion

- Reasonable suspicion to stop the vehicle.
- Observe the driver's actions and vehicle maneuvers during the stopping sequence.
- Be alert for unexpected or dangerous behavior.
Driving Cues:

- A study, conducted in 1997, supported the driving cues of impairment at blood alcohol concentration levels of 0.08 or higher (Detection of DWI at BACs Below 0.10)

- Driving Cues:
  - Problems Maintaining Proper Lane Position (probability of impairment = 50%-75%)
  - Speed and Breaking Problems (probability of impairment = 45%-70%)
  - Vigilance Problems (probability of impairment = 55%-65%)
  - Judgment Problems (probability of impairment = 35%-90%)
  - Post Stop Cues (probability of impairment = 85%)
Unit I - SFST Rehester Training

Driving Cues > Problems Maintaining Proper Lane Position

- Weaving
- Straddling the lane line
- Turning with a wide radius
- Almost striking a vehicle or another object
- Weaving across lane lines
- Swerving
- Drifting
Driving Cues > Speed and Braking Problems

- Stopping problems
- Accelerating or decelerating for no apparent reason
- Varying speed
- Slow speed (10 or more mph under the limit)

Click on image to play video
Driving Cues > Vigilance Problems

- Driving in opposing lanes
- Driving the wrong way on a one way
- Slow response to traffic signals
- Slow or failure to respond to officer's signals
- Stopping in a lane for no apparent reason
- Driving without headlights at night
- Failure to signal or signaling that is inconsistent with action
Driving Cues > Judgement Problems

- Following too closely
- Improper or unsafe lane changes
- Illegal or improper turn
- Driving on other than the designated roadway
- Stopping inappropriately in response to the officer
- Inappropriate or unusual behavior
- Appeared to be impaired
Driving Cues > Post Stop Cues

- Difficulty with motor vehicle controls
- Difficulty with exiting the vehicle
- Fumbling with the driver's license or registration
- Repeating questions or comments
- Swaying, unsteady, or balance problems
- Leaning on the vehicle or other object
- Slurred speech
- Slow to respond to officer or requiring the officer to repeat
- Providing incorrect information or changing answers
- Odor of alcoholic beverage from the driver

Activity

Select one choice that describes the most obvious driving cue of impairment.

- Failure to signal or signaling that is inconsistent with action
- Turning with a wide radius
- Driving the wrong way on a one-way street
- Accelerating or decelerating for no apparent reason

Click on image to play video
Phase 2 - Personal Contact: Pre-Exit Screening

- Suspect's vehicle and patrol vehicle have come to a complete stop

- All conversation between the officer and the suspect prior to the suspect's exit from the vehicle

- Decision to instruct the suspect to exit the vehicle
Phase 2- Personal Contact: Pre-Exit Screening

- Sight
- Hearing
- Smell
Unit I
Phase 1-2: Vehicle in Motion and Personal Contact

Phase 2- Personal Contact: Pre-Exit Screening > Sight

- Bloodshot eyes
- Soiled clothing
- Fumbling fingers
- Unusual actions
- Bruises, bumps, and scratches
Phase 2 - Personal Contact: Pre-Exit Screening > Hearing

- Slurred speech
- Admission of drinking
- Inconsistent responses
- Unusual statements
- Abusive language
Phase 2 - Personal Contact: Pre-Exit Screening > Smell

- Alcoholic beverage
- "Cover-up" odors
- Other unusual odors
Phase 2- Personal Contact: The Exit Sequence

- Instruct the suspect to exit the vehicle
- Suspect is not yet under arrest
- Observe the suspect exiting the vehicle

### Lesson Plan

#### UNIT 2: PHASE 3: PRE-ARREST SCREENING

- **Unit 2: Phase 3: Pre-Arrest Screening**
  1. Introduction
  2. Horizontal Gaze
     Nystagmus (HGN)
  3. Divided Attention Test

- **Introduction**
  
  1. Two types of SFSTs:
     - Horizontal Gaze
       Nystagmus Test
     - Divided Attention Tests
  2. Only valid when administered in a standardized manner
  3. Standards must be maintained in order for their results to be used
  4. Officers should not deviate from the administration instructions

### Instructor Notes

Display slide.

Display slide.

This unit covers the pre-arrest screening phase of standardized field sobriety testing, in particular, two types of tests are described: the Horizontal Gaze Nystagmus test and two divided attention tests. Keep in mind that these tests are only valid when administered in a standardized manner. Rigid criteria were used to validate the SFSTs. These criteria must be met each time a test is administered in order for the results to be admissible in a court of law. Therefore, the officer should not deviate from the administration instructions, doing so can weaken the case against the suspect.

<th>Aides</th>
<th>Lesson Plan</th>
<th>Instructor Notes</th>
</tr>
</thead>
</table>
| ![Image] Display slide 28 | **Introduction (continued)**  
  1. Officer Safety  
  - Avoid being in close proximity to the suspect  
  - Never have their back to the suspect  
  - Angle their weapon side away from the suspect | Display slide.  
 Emphasize to the students that officer safety is always a primary concern. To protect themselves, officers should: Avoid being in close proximity to the suspect if threats are sensed or real; never have their back to the suspect; and angle their weapon side away from the suspect. |
| ![Image] 40 Minutes | **Horizontal Gaze**  
**Nystagmus (HGN)** | |
| ![Image] Display slide 29 | **Horizontal Gaze**  
**Nystagmus – Definition**  
1. Involuntary jerking of the eyes as they move to the side  
2. Caused by alcohol and certain other drugs  
3. First standardized field sobriety test administered when the officer has determined that reasonable suspicion of impairment exists. | Display slide.  
| ![Image] Display slide 30 | **Positioning the Suspect:**  
The suspect should stand with:  
1. Feet together  
2. Hands at sides  
3. Head facing forward, remaining motionless | Display slide.  
Demonstrate the position of the suspect. |

</table>
| Display slide 37 and play video | **Distinct Nystagmus at Maximum Deviation**
1. Position the stimulus:
   - About 12-15 inches in front of the suspect’s nose
   - Slightly above eye level
   - Begin with the left eye
   - Move the stimulus all the way to the right
   - Hold this position for a minimum of 4 seconds
   - Move the stimulus all the way out to the left
   - Hold this position for a minimum of 4 seconds
   - Repeat for both eyes
   - Nystagmus must be distinct and sustained | Display slide.
Go over how an officer should check for distinct Nystagmus at maximum deviation then show the video clip. |
| Display slide 38 | **Distinct Nystagmus at Maximum Deviation (continued)**
Distinct and sustained nystagmus | |
| Display slide 39 and play video | **Onset of Nystagmus Prior to 45°**
1. Position the stimulus:
   - Approximately 12-15 inches in front of the suspect’s nose
   - Slightly above eye level
   - Check the left eye first
   - Move the stimulus slowly to the right | Display slide.
Explain that even when not impaired, about half of the subjects will exhibit slight nystagmus when the eye is held at maximum deviation. This clue can only be counted if the nystagmus is distinct and sustained. |

SFST Refresher Training
Instructor Manual
- Hold the stimulus at the angle of onset
- Determine if less than 45°
- Check the right eye
- Move the stimulus slowly to the left
- Repeat at least once.

- **HGN Reliability**

  Display slide 40

  Point out that if the officer starts the stimulus directly in front of the suspect's nose, it will reach approximately 45 degrees when it is lined up with or slightly beyond the edge of the suspect's shoulder. Some white will usually be visible in the corner of the suspect's eye. This clue can only be counted if nystagmus begins prior to 45 degrees.

- **Activity**

  Display slide 41 and play video

  When the suspect exhibits at least four clues, this indicates, with a high degree of accuracy, that their blood alcohol level is above 0.10%

- **Activity - Answer**

  Display slide 41A

  Explain that you are about to show a video clip of an officer administering a Horizontal Gaze Nystagmus test. Tell the students to watch closely and try to determine which clues are exhibited by the subject.

  Play the video clip.

- **Divided Attention Tests**

  40 Minutes

  Display slide:

  Ask for a volunteer to determine how many clues were exhibited. Discuss the answer.

**Correct answer:** All 6 clues are exhibited.

</table>
- **Combining HGN, WAT, and OLS**

  Combining the required minimum of clues for HGN, WAT, and OLS, officers were accurate 91% of the time at estimating impairment levels at or above the 0.10 level.

- **Limitations**

  1. WAT and OLS require a relatively smooth surface and satisfactory weather conditions

  2. Over 65 years of age
     - Difficulty performing the WAT

  3. Over 65 or 50 pounds overweight
     - Difficulty performing the OLS

  4. Leg injury or an inner ear disorder

In addition to the clues, the officer should note the type of footwear the suspect is wearing and any other relevant observations.

Display slide.

Describe the limitations that officers should be aware of when administering the divided attention tests.

Display slide.
### Aides
- Difficulty performing balance tests

### Lesson Plan
5. Wearing shoes with heels higher than 2 inches
   - Difficulty performing balance tests

#### Activity

Instruction Stage stance for the Walk and Turn test should be:

1. Right foot 9 inches in front of the left; arms down at their sides.
2. Heel-to-toe; right foot in front of left foot; arms down at their sides.
3. Feet together; arms straight out from their sides.
4. Heel-to-toe, right foot in front of left; arms straight out from their sides.

During the Walking Stage of the Walk and Turn test, the suspect should:

1. Take ten steps down the line counting their steps out loud; turn; take ten steps back counting backwards from ten.
2. Take ten heel-to-toe steps down the line; turn; count to ten; take ten heel-to-toe steps back.
3. Take nine steps down the line with feet ten inches apart; turn; take nine steps back with feet ten inches apart.

### Instructor Notes
Show activity slide and choose someone to complete the two sentences. Discuss the answer.

**Correct answers:**

Heel-to-toe; right foot in front of left foot; arms at their sides

Take nine heel-to-toe steps down the line; turn; take nine heel-to-toe steps back; counting their steps out loud.

SFST Refresher Training
Instructor Manual
Unit 2
Phase 3: Pre-Arrest Screening

- Introduction
- Horizontal Gaze Nystagmus (HGN)
- Divided Attention Test
Unit 2

Law Enforcement

SFST Refresher Training

Phase 3: Pre-Arrest Screening

Introduction

- Two types of SFSTs:
  - Horizontal Gaze Nystagmus Test
  - Divided Attention Tests

- Only valid when administered in a standardized manner

- Standards must be maintained in order for their results to be used

- Officers should not deviate from the administration instructions
• Officer Safety
  - Avoid being in close proximity to the suspect
  - Never have their back to the suspect
  - Angle their weapon side away from the suspect
Horizontal Gaze Nystagmus Definition

- Involuntary jerking of the eyes as they move to the side
- Caused by alcohol and certain other drugs
- First standardized field sobriety test administered when the officer has determined that reasonable suspicion of impairment exists.
Horizontal Gaze Nystagmus Administration

Positioning the Suspect:

The suspect should stand with:

- Feet together
- Hands at sides
- Head facing forward, remaining motionless
SFST Refresher Training

Horizontal Gaze Nystagmus Administration

**Pre-Test Screening**

- Remove Eyeglasses
- Compare Pupil Size
- Check Tracking Ability
Horizontal Gaze Nystagmus Administration > Pupil Size

Pupil Size
Position the stimulus:

- Approximately 12-15 inches in front of the suspect’s nose
- Slightly above eye level
- Compare pupil size

Distinctly unequal pupil size may indicate the suspect has a head injury or medical disorder

Check for Resting Nystagmus
Horizontal Gaze Nystagmus Administration > Checking for Equal Tracking

Checking for Equal Tracking

Position the stimulus

- Approximately 12-15 inches in front of the suspect’s nose
- Slightly above eye level
- Move stimulus to right
- Move stimulus back all the way to the left
- Return the stimulus to center

Click on image to play video
• Lack of Smooth Pursuit
• Distinct Nystagmus at Maximum Deviation
• Onset of Nystagmus Prior to 45 degrees
SFST Refresher Training

HGN Administration > Lack of Smooth Pursuit

Position the stimulus:
- Approximately 12-15 inches in front of the suspect's nose
- Slightly above eye level
- Begin with the left eye
- Move the stimulus slowly
- Check the right eye
- Approximately 2 seconds out and 2 seconds back
- Repeat at least once
SFST Refresher Training

HGN Interpretation> Lack of Smooth Pursuit

• Unimpaired subject’s eyes move smoothly like a marble across glass

• Impaired subject’s eyes move like a marble across sandpaper
HGN Administration > Distinct Nystagmus at Maximum Deviation

Position the stimulus:

- About 12-15 inches in front of the suspect’s nose
- Slightly above eye level
- Begin with the left eye
- Move the stimulus all the way to the right
- Hold this position for a minimum of 4 seconds
- Move the stimulus all the way out to the left
- Hold this position for a minimum of 4 seconds
- Repeat for both eyes
- Nystagmus must be distinct and sustained

Click on image to play video
HGN Administration > Distinct Nystagmus at Maximum Deviation

- Distinct and sustained nystagmus
HGN Administration > Onset of Nystagmus Prior to 45°

Position the stimulus:

- Approximately 12-15 inches in front of the suspect's nose
- Slightly above eye level
- Check the left eye first
- Move the stimulus slowly to the right
- Hold the stimulus at the angle of onset
- Determine if less than 45°
- Check the right eye
- Move the stimulus slowly to the left
- Repeat at least once

Click on image to play video

**Law Enforcement**

**SFST Refresher Training**

**Unit 2**

**Phase 3: Pre-Arrest Screening**

**HGN Reliability**
Divided Attention Test

- Requires a person to simultaneously demonstrate two or more mental and physical capabilities.

- When impaired, many people are able to handle a single, focused-attention task fairly well.

- Most people, when impaired, cannot satisfactorily divide their attention to handle multiple tasks at once.
Types of Divided Attention Test

- Driving is a complex, divided attention task

- Impaired drivers must often ignore the less critical components of driving and focus their impaired attention on the more critical tasks

- Many psychophysical tests employ the concept of divided attention

- Tasks must be ones that a person can reasonably perform while sober
Types of Tests

- Walk-and-Turn (WAT)
- One-Leg Stand (OLS)
Walk-and-Turn: Administration

- Instructions Stage - the suspect is told to:
  
  - Assume a heel-to-toe stance - left foot on the line, right foot in front, heel-to-toe.
  
  - Place arms down at sides.
  
  - Do not start walking until told to do so.
  
  - Do you understand?
Walk-and-Turn: Administration

- Walking Stage
  - take nine heel-to-toe steps down the line
  - turn in a prescribed manner
  - take nine heel-to-toe steps back down the line

- To perform the turn
  - on the ninth step, keep your front foot on the line and turn by taking several small steps with the other foot
  - Do you understand?

- Final verbal instructions
  - keep watching feet
  - arms at sides
  - count steps out loud
  - don't stop walking until test is complete
  - Do you understand?
Walk-and-Turn: Interpretation

- 8 Clues of Impairment:
  - Can't maintain balance during the Instructions Stage
  - Starts too soon
  - Stops while walking
  - Misses heel-to-toe 1/2 inch or more between steps
  - Steps off the line
  - Raises arms six inches or more
  - Turns improperly
  - Takes the wrong number of steps
Walk-and-Turn: Interpretation Continued

- The officer may terminate the test at any time
  - for the suspect's safety
  - if the suspect steps off the line three or more times,
  - nearly falls at any time, or
  - experiences "leg lock"

- If the suspect cannot do the test, the officer should record this as if all eight clues were observed.

- Two or more indicates with 68% accuracy that the suspect has a BAC > 0.10.
Unit 2

Walk-and-Turn: Note-Taking

Walk and Turn

Instructions:

Stage

WALKING STAGE

FIRST HING STEPS

SECOND HING STEPS

CAN'T KEEP BALANCE

STARTS TOO SOON

STOPS WALKING

MISSES HEEL-TO-TOE

STOPS OFF LINE

RAISES ARMS

IMPROPER TURN (DESCEND)

CANNOT DO TEST (EXPLAIN)

OTHER:
Combining Clues from HGN and WAT

- 80% accurate in classifying suspects as impaired when the suspect exhibited:
  - four or more clues on the HGN test, and
  - two or more clues on the WAT test
One-Leg Stand: Administration

- Instructions Stage
  - feet together
  - arms at sides
One-Leg Stand: Administration

- Balance and Count Stage
  - raise one leg (of their choice) approximately 6 inches
  - look at the raised foot and count out loud (one thousand and one, one thousand and two, one thousand and three, and so on)
  - Do you understand?
  - officer should time the test and stop after thirty seconds

Click on image to play video
One-Leg Stand: Interpretation

- 4 Clues of Impairment:
  - Sways while balancing
  - Raises arms six inches or more
  - Hops
  - Puts foot down

- Two or more indicates with 65% accuracy that the suspect has a BAC $> 0.10$

- The officer may terminate the test at any time
  - for the suspect’s safety,
  - if the suspect puts foot down three or more times, or
  - is in danger of falling.

- If the suspect cannot do the test, the officer should record this as if all four clues were observed.

  2. Communicate evidence to people who weren't there
  3. Secure a conviction

Display slide.

Having descriptive field notes is the best way for an officer to convey evidence clearly and convincingly. This unit will look at some guidelines for taking clear, concise and detailed field notes.

Emphasize the importance of descriptive field notes. Although number scores on field sobriety tests help to determine probable cause, it is the descriptive field notes that can actually secure a conviction.

     - the accused was the driver
     - the accused was impaired
  2. How to prepare for trial and guidelines for testimony

- **Pre-trial Preparation**

  Preparation for testimony begins with:

---

**Instructor Notes**

- Display slide.

Although the majority of DWI cases do not actually go to trial, the arresting officer must be fully prepared to testify in court. Testimonial evidence in DWI cases is usually the only way to establish that the accused was in fact the driver of the vehicle alleged to have been involved in the incident. The officer's evidence presented at trial may also be the only source for establishing that the accused was impaired. This unit will look at how to prepare for trial and guidelines for testimony.

### Instructor Notes
Display activity slide. Ask for a volunteer to answer the question. Discuss the correct answers.

**Correct answers:**
- Review the case file
- Compile complete and accurate notes
- Discuss the case with other officers involved
- Mentally organize the elements of the case
Unit 5
Testimony and Pre-Trial Preparation

- Introduction
- Pre-Trial Preparation
- Guidelines for Testimony

Back to Unit 4
Introduction

- Testimonial evidence needed to establish that
  - the accused was the driver
  - the accused was impaired

- How to prepare for trial and guidelines for testimony
Pre-Trial Preparation

- Preparation for testimony begins with:
  - recognizing significant evidence and documenting it in the field notes
  - compiling complete and accurate notes
  - preparing a complete and accurate report
Pre-Trial Preparation

- Preparation for testimony continues prior to trial by:
  - reviewing the jacket or case file
  - discussing the case with other officers who assisted
  - mentally organizing the evidence
  - mentally organizing the testimony
Pre-Trial Preparation

- Upon receiving a subpoena or trial date:
  - review all records and reports
  - revisit the scene, if appropriate
  - list all the evidence during discovery and properly document it
  - compare notes with assisting officers
  - discuss the details of the case and testimony with the prosecutor assigned to the case
Guidelines for Testimony

- Present the facts of the case
- Testify to what was observed
  - Use language geared for the lay person
  - Don't guess - it's okay to say "I don't know"
  - Provide specific descriptive details
Guidelines for Testimony

- Testimony should NOT include:
  - testimony or evidence that has been excluded
  - embellished testimony
  - testimony that can appear biased for or against the defendant
Guidelines for Testimony

- Professional conduct
  - Avoid becoming agitated
  - Stick to the facts
Activity

Select all the appropriate actions an officer should take when preparing for testimony.

- Review the case file
- Discuss details of the case with the defense attorney
- Compile complete and accurate notes
- Call the suspect's immediate family
- Discuss the case with other officers involved
- Mentally organize the elements of the case

B   Summaries of Validation Research
ATTACHMENT A

SUMMARIES OF RELEVANT CASE LAWS

- **State v. Superior Court, 718 P.2d 171 (Ariz.1986)**

  This case is also known as the "Blake" case. It was the first case to reach the State Supreme Court level. The Arizona Supreme Court found that HGN satisfies the Frye standards for evidence to corroborate or attach the issue of a suspect's impairment. Because the court took judicial notice of HGN, it is not necessary to introduce expert scientific testimony to secure the admissibility of HGN. The court also set the standards governing the training of officers who would be qualified to testify about HGN. The court explicitly found that HGN cannot be used to establish BAC quantitatively in the absence of a chemical test. In this case, the arresting officer was attempting to use the angle of onset of nystagmus to give a quantitative estimate of BAC. The California court ruled that the officer was not entitled to testify as either a lay or expert witness about HGN, or to give his opinion about the defendant's BAC. The Court stated that, at the time, HGN was a new form of scientific evidence that had not yet shown its general acceptance in the scientific community. The officer's testimony in this case clearly demonstrated that he was not properly trained in HGN and didn't really understand how the test should be administered.

  In this case, the arresting officer was attempting to use the angle of onset of nystagmus to give a quantitative estimate of BAC. The California court held that the officer was not entitled to testify as either a lay or expert witness about HGN, or to give his opinion about the defendant's BAC. The court stated that, at the time, HGN was a new form of scientific evidence that had not yet shown its general acceptance in the scientific community. The officer's testimony in this case clearly demonstrated that he was not properly trained in HGN and didn't really understand how the test should be administered.

- **Iowa v. Murphy, 451 N.W.2d 154 (1990).**

  While this case also ruled that HGN test results could not be used to determine a specific BAC level, it did rule that the results of the test could be admitted into evidence because it was part of the SFST battery and the observations of impairment were objective in nature. The court also noted that the officer was properly trained to administer the test and that there was no need for the officer to be specially qualified to be able to interpret the results.

  The Ohio Supreme Court ruled that, while field sobriety tests are an effective means of identifying intoxicated drivers, their reliability depends largely upon the manner in which they are administered. The court held that even minor deviations from the standardized procedures promulgated by NHTSA could severely bias the results. Thus, SFSTs, including HGN, must be administered in strict compliance with those procedures, or the results are inadmissible.

- **Young v. City of Brookhaven, 693 So.2d 1355 (Miss. 1997)**

  The Mississippi Supreme Court held that although HGN is admissible to establish probable cause to arrest, it is not admissible at trial to prove the guilt or innocence of the defendant. This is contrary to the vast majority of cases that have addressed the issue. Most states that allow the admission of HGN evidence allow it to establish both probable cause to arrest and guilt or innocence.

  For the purpose of establishing probable cause, an officer may testify to the results of the SFSTs (including HGN) if it is shown that the officer has been adequately trained, and conducted them (SFSTs) in substantial accordance with that training. Deficiencies in the administration of the SFSTs go to the weight accorded the evidence and not to its admissibility.
ATTACHMENT B

SUMMARIES OF VALIDATION RESEARCH

- **Colorado Validation Study of the Standardized Field Sobriety Test (SFST) Battery - November 1995**

  This study researched the question, "How accurate are the officer's arrest and release decisions when the SFSTs are used by trained and experienced officers?" Using the standardized test battery described in this course, the researchers found that officers were more likely to error on the side of releasing drivers than on the side of incorrectly arresting drivers. Researchers concluded that the SFSTs are valid indices of the presence of alcohol at impairing levels.

- **Florida Validation Study of the Standardized Field Sobriety Test (SFST) Battery - 1997**

  This study was conducted in response to vigorous legal challenges to the validity of the SFST battery and to update the relevancy of the research to the current use of the tests. The data obtained during this study demonstrated that 95% of the officer's decisions to arrest the driver were correct. Furthermore, 82% of their decisions to release drivers were also correct. Therefore, it was concluded that the SFSTs not only assist law enforcement officers in removing impaired drivers from the roadways, they also protect the rights of the unimpaired driver.

- **Validation of the Standardized Field Sobriety Test Battery at BACs Below 0.10 Percent (NHTSA Study) - August 1998**

  The purpose of this study was to evaluate the accuracy of the Standardized Field Sobriety Test (SFST) battery to assist officers in making arrest decisions for DWI at BACs below 0.10. Data analysis found the SFSTs to be extremely accurate in discriminating between BACs above and below 0.08.

APPENDICES

A. Glossary
B. Overview for Prosecutors Program
C. State Offices of Highway Safety
D. NHTSA Regional Offices
GLOSSARY

**Alveolar Breath** - Breath from the deepest part of the lung.

**Blood Alcohol Concentration (BAC)** - Grams of alcohol found in 100 milliliters of blood.

**Breath Alcohol Concentration (BrAC)** - Grams of alcohol found in 210 liters of breath.

**Clue** - Something that leads to the solution of a problem.

**Cue** - A reminder or prompting as a signal to do something. A suggestion or a hint.

**Divided Attention Test** - A test that requires the subject to concentrate on both mental and physical tasks at the same time.

**DWI** - Driving While Intoxicated. (Also Driving While Impaired) Driving a vehicle while under the influence of alcohol or other drugs.

**DWI Detection Process** - The entire process of identifying and gathering evidence to determine whether or not a suspect should be arrested for a DWI violation.

The DWI detection process has three phases:
- Phase 1 – Vehicle in Motion,
- Phase 2 – Personal Contact,
- Phase 3 – Pre-arrest Screening

**Evidence** - A means by which an alleged fact may either be established or disproved.

Evidence of a DWI violation may be of various types:
1. Physical (or real) evidence: something tangible, visible, or audible.
2. Well established facts (judicial notice)
3. Demonstrative evidence: demonstrations performed in a courtroom
4. Written matter or documentation
5. Testimony

**Field Sobriety Test** - Any one of several roadside tests that can be used to determine whether a suspect is impaired.

**Horizontal Gaze Nystagmus (HGN)** - A standardized field sobriety test based on the involuntary jerking of the eyes as they gaze toward the side.

**Illegal Per Se** - Unlawful in and of itself. Used to describe a law that makes it illegal to drive while having a statutorily prohibited Blood Alcohol Concentration.

**Nystagmus** - An involuntary jerking of the eyes.
**One-leg Stand (OLS)** - A standardized divided attention field sobriety test.

**Personal Contact** - The second phase in the DWI detection process. In this phase the officer observes and interviews the driver face to face; determines whether to ask the driver to step from the vehicle; and observes the driver’s exit and walk from the vehicle.

**Pre-Arrest Screening** - The third phase in the DWI detection process. In this phase the officer administers standardized field sobriety tests to determine whether there is probable cause to arrest the driver for DWI, and administers or arranges for a preliminary breath test.

**Preliminary Breath Test (PBT)** - A pre-arrest breath test administered during investigation of a possible DWI violation to obtain an indication of the person’s blood alcohol concentration.

**Psychophysical “Mind body”** - Used to describe field sobriety tests that measure a person’s ability to perform both mental and physical tasks at the same time.

**Standardized Field Sobriety Test Battery** - A battery of three tests, Horizontal Gaze Nystagmus, Walk-and-Turn, and One-Leg Stand, administered and evaluated in a standardized manner to obtain validated indicators of impairment based on NHTSA research.

**Tidal Breath** - Breath from the upper part of the lungs and mouth.

**Vehicle in Motion** - The first phase in the DWI detection process. In this phase the officer observes the vehicle in operation, determines whether to stop the vehicle, and observes the stopping sequence.

**Vertical Gaze Nystagmus** - The involuntary jerking of the eyes occurring as the eyes gaze upward.

**Walk-and-Turn (WAT)** - A standardized divided attention field sobriety test.
APPENDIX B

OVERVIEW FOR PROSECUTORS
(CD-ROM only)

The SFST Overview for Prosecutors is designed for prosecutors who want to become more familiar with SFST. The program also gives prosecutors a better understanding of how law enforcement officers are trained to carry out the laws that pertain to DWI. This program is accessed by installing the SFST Refresher Training CD-ROM and selecting Overview for Prosecutors when the startup routine prompts the user to select a program.

The program includes an introduction and five units.

Unit 1: What is the SFST Program and How did it Originate?

This unit provides some background information and describes the purpose of the SFST program.

Topics include:

- Introduction
- Development of SFST Program
- Validation of SFSTs

Unit 2: How are Police Officers Trained?

This unit provides a summary of the training that law enforcement officers receive.

Topics include:

- Introduction
- Summary of Training
- Periodic Updates

Unit 3: How does the Officer Make the Decision to Arrest?

This unit describes how an officer makes the decision to arrest including an overview of the 3 phases of detection.

Topics include:

- Introduction
- Three Phases of Detection
- Interpretation of Evidence
Unit 4: The SFST Battery

This unit has a description of the SFST battery, including administration of the tests and interpretation of the results.

Topics include:

- Introduction
- Horizontal Gaze Nystagmus
- Walk-and-Turn
- One-Leg Stand
- Other Tests
- Inconsistent BAC
- Questions to Ask the Officer

Unit 5: How Can I Learn More About SFSTs?

This unit provides information on how to learn more about the SFST program.

Topics include:

- Introduction
- Attending SFST Training
- National Traffic Law Center
