SFST Refresher Training Course

Instructor Manual
2004 Edition
PREFACE

The Facilitator’s Guide provides an introduction and overview of the SFST Refresher Training Program. The SFST Refresher Training Program is available as a CD-ROM program and as an Instructor-led program. This Facilitator’s guide will describe both formats.

BOTH THE CD-ROM AND THE INSTRUCTOR-LED SFST REFRESHER TRAINING PROGRAMS ARE INTENDED FOR THE PURPOSES OF REFRESHER TRAINING ONLY. THESE PROGRAMS ARE NOT A SUBSTITUTE FOR NHTSA/IACP APPROVED DWI DETECTION AND STANDARDIZED FIELD SOBRIETY TESTING TRAINING.

The SFST Refresher Training Program focuses on enforcement of alcohol impaired driving. Other programs have been designed to improve police officers' skills in detecting and apprehending drug impaired drivers, including a four-hour module, "Introduction to Drugs That Impair" and an eight-hour module, "Drugs That Impair Driving." These are available from the National Highway Traffic Safety Administration (NHTSA).

For more information regarding other materials and programs, contact your State Office of Highway Safety or your NHTSA Regional Training Coordinator (See Appendices D & E).

PURPOSE OF THIS DOCUMENT

The Facilitator's Guide is intended to facilitate planning and implementation of the SFST Refresher Training Program. The guide provides a general overview of the sequence of instruction for the SFST Refresher Training Program. This guide also provides specific information on how to use the CD-ROM program as well as an outline of the Instructor-led course materials.

This guide is a tool to be used by a facilitator overseeing students working individually with the CD-ROM program or by an instructor leading a group of students in a classroom setting.

OVERVIEW OF THE COURSE

• Intended Audience

SFST Refresher Training is for law enforcement officers at the Federal, state, county and local level who have already taken and successfully completed the NHTSA and IACP approved DWI Detection and Standardized Field Sobriety Testing Training Program.

• Purpose of the Training

The primary purpose the SFST Refresher Training Program is to improve the overall consistency of how the SFST test battery is administered by individual police officers. Officers can refresh their skills at:

➤ recognizing and interpreting evidence of DWI;
➤ administering and interpreting the scientifically validated sobriety tests; and
➤ describing DWI evidence clearly and convincingly.

The refresher training also provides officers with information regarding recent case law and research studies.

• Course Content

The SFST Refresher Training Program has 6 content units. Each unit has an introduction, several topics, and an activity. The following is a description of the topics and content covered in each unit:
Unit 1: Phase 1-2: Vehicle in Motion and Personal Contact

Description

This unit is a review of the first two phases of Standardized Field Sobriety Testing. Phase 1, Vehicle in Motion, covers the officer's initial observations of vehicular operation, the decision to stop, and observation of the stop. Phase 2, Personal Contact, covers the face-to-face observation and interview of the driver while still in the vehicle and the decision to instruct the driver to exit the vehicle. This unit also describes how officers can use the DWI Investigation Fields Note Form to document important evidence collected during Phase 1 and Phase 2.

Visuals

The visuals in Unit 1 include a combination of still images and video. The video is used to illustrate the driving cues of impairment. Each of the five driving cues presented has an accompanying video clip of a driver exhibiting the cues.

Activities

Activity #1: Watch a short video clip and see if you can identify the driving cue that indicates that the driver may be impaired. Select one choice that describes the most obvious driving cue of impairment. (A video clip shows a vehicle turning onto a one way street.)

1. Failure to signal or signaling that is inconsistent with action
2. Turning with a wide radius
3. Driving the wrong way on a one way street
4. Accelerating or decelerating for no apparent reason

Activity #2: What is the major decision an officer must make during Phase Two?

1. Whether to stop the vehicle
2. Whether to arrest the driver
3. Whether to request the driver to exit the vehicle
4. Whether to administer SFST

Unit 2: Phase 3: Pre-Arrest Screening

Description

This unit covers the pre-arrest screening phase of Standardized Field Sobriety Testing. The first topic covers the administration and interpretation of the Horizontal Gaze Nystagmus test. The second topic covers the administration and interpretation of the two validated divided attention tests: the Walk-and-Turn and the One-Leg Stand.
Visuals

Unit 2 visuals include still images, graphics, and video. Video clips are used to demonstrate how to administer the Horizontal Gaze Nystagmus, Walk-and-Turn, and One-Leg Stand tests.

Activities

Activity #1: After watching a video of an officer administering a Horizontal Gaze Nystagmus test, you will be asked to identify the clues exhibited by the subject. (A video clip shows a subject exhibiting all six clues of nystagmus. The student answers the question by selecting the appropriate boxes on the DWI Investigation Fields Note form.)

1. Lack of smooth pursuit (both eyes)
2. Distinct nystagmus at maximum deviation (both eyes)
3. Onset of nystagmus prior to 45 degrees (both eyes)

Activity #2: Instructions Stage stance for the Walk-and-Turn test should be:

1. Right foot 9 inches in front of the left; arms down at their sides.
2. Heel-to-toe; right foot in front of left foot; arms down at their sides.
3. Feet together; arms straight out from their sides.
4. Heel-to-toe, right foot in front of left; arms straight out from their sides.

During the Walking Stage of the Walk-and-Turn test, the suspect should:

1. Take ten steps down the line counting their steps out loud; turn; take ten steps back counting backwards from ten.
2. Take ten heel-to-toe steps down the line; turn; count to ten; take ten heel-to-toe steps back.
3. Take nine steps down the line with feet ten inches apart; turn; take nine steps back with feet ten inches apart.
4. Take nine heel-to-toe steps down the line; turn; take nine heel-to-toe steps back counting their steps out loud.

Unit 3: Interpretation of Evidence/Making the Arrest Decision

Description

This unit is a review of how an officer decides to make an arrest following the administration and interpretation of the SFST test battery. This unit also covers some of the reasons for inconsistent blood alcohol concentrations (BAC) and options for dealing with inconsistent BAC.
Visuals

The visuals for this unit include several still images.

Activity

From this list, select all of the drugs that cause HGN.

1. Inhalants
2. Marijuana
3. PCP
4. CNS stimulants
5. Hallucinogens
6. CNS depressants

Unit 4: Field Notes

Description

This unit describes the purpose of taking descriptive field notes and provides some guidelines and examples for taking clear, concise notes. This unit also reviews the DWI Investigation Field Notes form with a description of each section.

Visuals

The visuals for this unit include several still images and a graphic of the DWI Investigation Field Notes form. This unit also uses a video clip for the activity.

Activity

See if you can choose the best way to describe an incident. Select one choice that best describes the incident. (A video clip shows a vehicle failing to stop at a stop sign and turning where a child is crossing in a crosswalk.)

1. Driver made an illegal turn in a school zone
2. Driver did not slow down for child in cross walk
3. Vehicle made a jerky stop at a stop sign
4. Vehicle jerked to slow down; failed to stop at stop sign; turned with disregard for child in crosswalk
Unit 5: Testimony and Pre-Trial Preparation

Description

This unit looks at how to prepare for trial and guidelines for testimony, including presenting the facts, do's and don'ts, and professional conduct.

Visuals

The visuals for this unit include several still images.

Activity

Select all the appropriate actions an officer should take when preparing for testimony.

1. Review the case file
2. Discuss details of the case with the defense attorney
3. Compile complete and accurate notes
4. Call the suspect's immediate family
5. Discuss the case with other officers involved
6. Mentally organize the elements of the case

Unit 6: New Developments

Description

This unit highlights some of the new developments in the research, administration, and interpretation of the SFSTs. Topics covered include state case law on HGN and validation research. This unit also provides an overview of the four-hour training module entitled "Introduction to Drugged Driving" and the eight-hour module "Drugs that Impair Driving" as well as a description of the Drug Evaluation and Classification program.

Visuals

The visuals for this unit include graphics and several still images.

Activity

In the Florida Validation Study, it was found that an officer's decision to arrest is correct what percentage of the time?

1. 45%
2. 65%
3. 75%
4. 95%
• Length of the Training

Instructor-led

The classroom-based, instructor-led program is designed as a one-day course. The content alone will take approximately 5 ½ hours to cover. This time may vary depending upon each individual instructor, the number of students in the class, and the number and length of breaks.

CD-ROM

The estimated contact time for the CD-ROM program is 2 ½ hours. (Contact time refers to the amount of time a typical student would require to view all of the content screens, complete the exercises and take the tests. It does not include the amount of time required to read all of the reference documents on the CD, or to review material a second or third time.) This estimate is based on a student working at an individual pace. If the CD-ROM is being used in a classroom setting, the length of time will depend upon the instructor but should take no longer than 8 hours.

• CD-ROM vs. Instructor-led

The content for both SFST Refresher Training programs is identical. The selection of a format should be based on your facility’s available equipment, the availability of an instructor, and the availability of the officers to be trained. While each format has advantages, instructors can choose a format that is best suited to their specific needs.

CD-ROM Training

The CD-ROM program allows for greater flexibility and can be used on a wide range of desktop and notebook computers (see ‘Installation Instructions’ for the minimum system requirements). The CD-ROM format is designed to be used by individual officers sitting at a personal computer. Because of the portability of a CD-ROM, officers who are unable to take time away from their duties or to travel great distances to be part of a classroom can still complete the training.

Consider using the CD-ROM program if you:

1. have the equipment,
2. do not have a qualified instructor,
3. have remotely located officers to be trained, or
4. are unable to establish an optimal date to bring a class together.
Instructor-led Training

The instructor-led course is designed to be used by an Instructor in a classroom setting. The equipment requirements are different than the CD-ROM program (see 'Visual Aids').

Consider using the Instructor-led program if you:

1. do not have the appropriate equipment,
2. prefer the classroom-based, instructor-led atmosphere, or
3. have a large group of officers to be trained at one time.

HOW TO USE THE CD-ROM

The SFST Refresher Training CD-ROM contains two programs: SFST Refresher Training for Law Enforcement Officers (referred to in this document) and an Overview for Prosecutors. The Overview for Prosecutors is designed for prosecutors to learn more about how officers are trained in the use of the SFST test battery (see Appendix C for an outline of the prosecutor program). Both of these programs are accessed through the same installation and start up routine. When a user starts the CD, they are prompted to select one of the two programs.

• Installation Instructions

Before beginning the installation, be sure that the computer to be used meets the minimum system requirements.

Minimum System Requirements:

► Windows 95/98/NT
► Pentium 133 MHz or equivalent
► 20 MB free hard drive space
► 16MB RAM
► 4x CD-ROM
► Sound card and speakers
► Monitor: 800 x 600 resolution; High Color (16bit)

Note: To use the web links found throughout the program, a connection to the internet must be active.
To Install the CD

Insert the SFST Refresher Training CD into the CD-ROM drive.

1. The SFST Install application should appear.
2. Follow the on-screen instructions to complete the installation.
   Note: The installation will automatically set up QuickTime® 4.0 and Adobe Acrobat® Reader.
3. To start the program, click the START button, select PROGRAMS, and then select SFST - An Interactive Guide.
4. Make sure to keep the CD in the CD-ROM drive.

Troubleshooting

If the SFST Install application does not appear automatically, you can install the program manually.

1. Make sure the SFST Refresher Training CD is in the CD-ROM drive.
2. Click the START button, then select RUN.
3. Click the BROWSE button, use the drop down menu to locate your CD drive.
4. Select SETUP.EXE from the list in the window and click OPEN.
5. Click OK to start the installation.
6. Follow the on-screen instructions to complete the installation.
   Note: The installation will automatically set up QuickTime® 4.0 and Adobe Acrobat® Reader.
7. To start the program, click the START button, select PROGRAMS, and then select SFST - An Interactive Guide.
8. Make sure to keep the SFST CD in the CD drive.

• Student Log In

Once the program has been installed and started (see “Installation Instructions”), an officer begins by logging in. The log in information is recorded on the officer’s final report (see “Student Tracking and Management”).

The first screen in the log in process has fields for entering:

➢ First Name,
➢ Last Name,
➢ Unit, Department or Agency, and
➢ Badge/ID Number

Using the keyboard to enter the information and the tab key to move from field to field, the officer must supply the requested information. If the information is not entered, a message is displayed informing the officer that the information is required to proceed.
The next screen in the log in is a disclaimer reminding the officer that this program is intended for refresher training only and not a substitute for DWI Detection and Standardized Field Sobriety Testing training.

The last screen in the log in process has fields for entering answers to the following questions:

1. When did you attend (and successfully complete) the NHTSA/IACP approved DWI Detection and Standardized Field Sobriety Testing training?
2. How long was the training?
3. How much experience do you have administering the SFST battery? (number of arrests using the battery)

Finally, the student is instructed to insert a floppy disk into the computer (unless one has been previously inserted). The floppy disk is necessary because when the student exits the program, all of the above information along with scores on the pretest and final test are written to the floppy disk.

- **Navigation Buttons**

The navigation buttons are clickable areas on the screen that enable the student to go to a different part of the course. The operation of these navigation buttons is described below.

**Next**

This button allows the student to proceed to the next screen. The Next button is not available when the student must respond to an instruction that requires an interaction. In this situation, the button does not highlight when rolled over and nothing happens if it is selected. At the end of a lesson, the Next button takes the student to the appropriate unit menu to select another lesson.

**Back**

This button allows the student to go back to the previous screen. If the student is at the beginning of a lesson, the Back button will not highlight when rolled over and nothing happens if it is selected.

**Menu**

The Menu button will return the student to either the Unit Menu or the Main Menu depending upon where they are in the program. This button is always active.
Quit

The Quit button will open a dialog box that reads, "Click OK to exit or Cancel to return to the program." If the student clicks OK they are exited out of the program. If the student clicks Cancel, the dialog box goes away and they remain on the current screen.

Help

Selecting the Help button opens the course tutorial. This is the same tutorial that is provided during the course introduction. The tutorial is an overview of how each of the navigation features and tools operate. When the student rolls the mouse over each item on the screen, a pop-up text box appears that explains what the item does and how it operates. When the student clicks on the Close button the tutorial goes away and they return to where they left off.

• Tools

Along with the navigation buttons, the course interface has a button labeled “Tools”. When the student clicks on the Tools button, a list animates up from the button.

The following tools are available throughout the program:

Glossary

The Glossary is an on-line dictionary of the technical terms used in the program. When the student clicks on the Glossary from the Tools Menu, the Glossary will appear. The Glossary screen contains three boxes – one for an alphabet that allows the student to select a letter, one with a list of terms that begin with the currently highlighted letter, and one for the definition. The student can select a letter to see a list of words that begin with that letter and then select a term from the list to see the definition.

Throughout the program, terms that are found in the glossary are highlighted in red (only once per screen). The student can click on the term and the glossary will appear with the definition to that term displayed.

The student clicks on the Close button to exit the glossary and return to where they left off.

Take Notes

When the student clicks on Take Notes from the Tools Menu, a blank text box will appear. The student can type directly into this box. The student clicks on the Close button to exit this screen and return to where they left off.
References

When the student selects References from the Tools Menu, a screen showing reference documents is displayed. This screen also lists contact information and website links. There is also an option to select Field Notes Form. When the Fields Note Form or the contact information is selected, Adobe Reader will be launched (the software for this tool is installed during the installation routine) and the document will be opened. The student can scroll through the document and print all or part of it. When the student is finished with the document, they can close the Adobe Reader window by clicking on the 'X' in the upper right hand corner of the window. If the student's workstation is connected to the internet, selecting a website link will take them to the appropriate site. Clicking on the 'X' in the upper right hand corner will return the student to the reference screen.

The student clicks on OK to close the References screen and return to where they left off.

Bookmark

This option allows the student to create, modify and delete a bookmark for any screen in the program. When the Bookmark option is selected, a window will appear that shows the current list of bookmarks that have been set by the student. Buttons along the bottom of the window allow the student to “Edit Bookmark”, “Delete” a bookmark, “Add” a bookmark for the current screen, or “Clear All” current bookmarks. A small text field is enabled when the student selects either “Add” or “Edit Bookmark”. The student types the new or modified name in this field. To go to a specific bookmark on the list, the student highlights a bookmark name and clicks on “Go To”. Once at a bookmark, the student may go back to the original location in the program by clicking on Bookmark from the Tools Menu and selecting “Back”.

Print

When the student selects “Print” from the Tools Menu a dialog boxed is displayed that reads “Click OK to print the current screen or Cancel if you changed your mind.” If the student selects OK (and the workstation is connected to a printer) the current screen display is printed. If the student selects Cancel, the dialog box goes away and they remain on the current screen.

Student Tracking and Management

To begin the program, law enforcement officers are required to insert a floppy disk into the computer. A Word file is created on the floppy disk using the student's last name as the file name (i.e., Smith.doc).
The following information is recorded in the student file:

- Date
- Time
- Information recorded during log in (name, badge number, experience, etc.)
- Response to the disclaimer (agree or disagree)
- Pretest score (percentage correct and number or missed questions)
- Final Test score (percentage correct and number or missed questions)

An officer can take the pretest and final test as often as they like; the program will record all subsequent scores and list them by time. **Note:** If a student has taken one or both of the tests, exits the program, and returns at a later time it is advised that the student use a second floppy disk or add a number to their last name (for instance, ‘Smith’ and then ‘Smith2’). This will prevent the records from the first visit from being overwritten.

The training officer or system administrator can access the data from the student’s floppy disk and print out a report if desired. For purposes of course management, the student’s data can be exported into a database or spreadsheet.

**INSTRUCTOR-LED COURSE MATERIALS**

The course materials for the Instructor-led SFST Refresher Training Program consist of the following documents and materials:

- Instructor's Lesson Plans Manual
- Visual Aids
- Student Manual

- **Instructor's Lesson Plans Manual**

  The Instructor's Lesson Plans Manual is a complete and detailed blue print of what the course covers and of how it is to be taught. It is organized into 6 units corresponding to the six units on the CD-ROM. Each unit consists of a cover page, an outline page, the lesson plans, a paper copy of the visual aids ("slides"), and any other related material referenced in the unit.

  ➤ The **cover page** presents the unit's title and the total instructional time required to complete the unit.

  ➤ The **outline page** lists the content segments and principal types of learning activities that take place during the unit.
The lesson plans are arranged in a three-column format.

1. The left column contains the training aides (i.e., time frames and visual aids, etc.)
2. The center column contains the content (i.e., an outline of what is to be taught)
3. The right column contains Instructor Notes. These notes provide guidance concerning how the content is to be taught. For example, the instructor notes might include the approximate amount of time to be devoted to a particular topic and/or points requiring special emphasis.

In addition to the content for each of the 6 units, the Instructor's Lesson Plans Manual includes the following:

- Glossary
- DWI Investigation Field Notes Form
- Pretest
- Final Test
- Case Law
- Validation Research Studies
- State Offices of Highway Safety
- NHTSA Regional Offices

The Instructor's Lesson Plans Manual is designed to prepare the instructor to teach the course. Instructors should review the entire set of lesson plans to become familiar with the content and develop a clear understanding of the course flow. Instructors are expected to gather and be prepared to operate any equipment necessary (i.e., projection screen, computer with PowerPoint software, VCR). Instructors should also have all student manuals and handouts (i.e., pretest and final test) prepared before class begins.

Instructors should use the lesson plans as a tool for helping to maintain the sequence and pace of presentations and other learning activities. The Instructor's Lesson Plans Manual is not a script and should not be read verbatim to the students.

- Visual Aids

The instructor-led program uses two types of visual aids:

- PowerPoint presentations
- Videotape

The PowerPoint presentation that accompanies the instructor-led course has the same look and feel as the CD-ROM program including the graphics and embedded video. The PowerPoint presentation is used to emphasize key points and support the instructor's presentation. Instructors should use this presentation when a computer and/or projection system is available for use.
If a computer is not available to display the PowerPoint presentation, instructors can use the print-ready format. This is a black and white, paper version of the PowerPoint presentation (found in the Instructor's Lesson Plans Manual) that can be printed as handouts or transparencies. A videotape which includes all of the video clips used in the program can be used to accompany this version of the presentation.

In addition to the PowerPoint presentation and the videotape, the instructor should feel free to use any available chalkboard or flipchart paper to add emphasis to a presentation.

- **Student Manual**

  The SFST Refresher Training Student Manual serves as a reference guide for the student. Each student should receive a manual that includes:

  - Training Objectives
  - Glossary
  - DWI Investigation Field Notes Form
  - Pretest
  - Summary of the content for each unit
  - IACP Standards
  - Validation Research Studies
  - State Offices of Highway Safety
  - NHTSA Regional Offices

**TESTING**

- **Description of Pretest and Final Test**

  Both the CD-ROM and the Instructor-led programs have a 15-question, multiple-choice pretest and a 15-question, multiple-choice final test. In the CD-ROM program, students access the tests by selecting the appropriate choice from the Main Menu. For the Instructor-led program, the test is handed out and taken in a paper-based, written format. The questions for the pretest and the final test are identical in the CD-ROM and Instructor-led courses and are adapted from the DWI Detection and Standardized Field Sobriety Testing Training Program.

- **Pretest Questions**

  Following are the 15 questions that make up the Pretest. The correct answers are shown in bold.
APPENDIX A
Glossary
Glossary

**Alveolar Breath** - Breath from the deepest part of the lung.

**Blood Alcohol Concentration (BAC)** - Grams of alcohol found in 100 milliliters of blood.

**Breath Alcohol Concentration (BrAC)** - Grams of alcohol found in 210 liters of breath.

**Clue** - Something that leads to the solution of a problem.

**Cue** - A reminder or prompting as a signal to do something. A suggestion or a hint.

**Divided Attention Test** - A test that requires the subject to concentrate on both mental and physical tasks at the same time.

**DWI - Driving While Intoxicated.** (Also Driving While Impaired) Driving a vehicle while under the influence of alcohol or other drugs.

**DWI Detection Process** - The entire process of identifying and gathering evidence to determine whether or not a suspect should be arrested for a DWI violation.

The DWI detection process has three phases:
- Phase 1 - Vehicle in Motion,
- Phase 2 - Personal Contact,
- Phase 3 - Pre-arrest Screening

**Evidence** - A means by which an alleged fact may either be established or disproved. Evidence of a DWI violation may be of various types:
- Physical (or real) evidence: something tangible, visible, or audible.
- Well established facts (judicial notice)
- Demonstrative evidence: demonstrations performed in a courtroom
- Written matter or documentation
- Testimony

**Field Sobriety Test** - Any one of several roadside tests that can be used to determine whether a suspect is impaired.

**Horizontal Gaze Nystagmus (HGN)** - A standardized field sobriety test based on the involuntary jerking of the eyes as they gaze toward the side.

**Illegal Per Se** - Unlawful in and of itself. Used to describe a law that makes it illegal to drive while having a statutorily prohibited Blood Alcohol Concentration.
Nystagmus - An involuntary jerking of the eyes.

One-leg Stand (OLS) - A standardized divided attention field sobriety test.

Personal Contact - The second phase in the DWI detection process. In this phase the officer observes and interviews the driver face to face; determines whether to ask the driver to step from the vehicle; and observes the driver's exit and walk from the vehicle.

Pre-Arrest Screening - The third phase in the DWI detection process. In this phase the officer administers standardized field sobriety tests to determine whether there is probable cause to arrest the driver for DWI, and administers or arranges for a preliminary breath test.

Preliminary Breath Test (PBT) - A pre-arrest breath test administered during investigation of a possible DWI violation to obtain an indication of the person's blood alcohol concentration.

Psychophysical “Mind body” - Used to describe field sobriety tests that measure a person's ability to perform both mental and physical tasks at the same time.

Standardized Field Sobriety Test Battery - A battery of three tests, Horizontal Gaze Nystagmus, Walk-and-Turn, and One-Leg Stand, administered and evaluated in a standardized manner to obtain validated indicators of impairment based on NHTSA research.

Tidal Breath - Breath from the upper part of the lungs and mouth.

Vehicle in Motion - The first phase in the DWI detection process. In this phase the officer observes the vehicle in operation, determines whether to stop the vehicle, and observes the stopping sequence.

Vertical Gaze Nystagmus - An up and down jerking of the eyes which occurs when the eyes gaze upward at maximum elevation.

Walk-and-Turn (WAT) - A standardized divided attention field sobriety test.

APPENDIX C
Overview for Prosecutors Program (CD-ROM only)
Overview for Prosecutors Program (CD-ROM only)

The SFST Overview for Prosecutors is designed for prosecutors who want to become more familiar with SFST. The program also gives prosecutors a better understanding of how law enforcement officers are trained to carry out the laws that pertain to DWI. This program is accessed by installing the SFST Refresher Training CD-ROM and selecting Overview for Prosecutors when the startup routine prompts the user to select a program. The program includes an introduction and five units.

Unit 1: What is the SFST Program and How did it Originate?

This unit provides some background information and describes the purpose of the SFST program.

Topics include:

- Introduction
- Development of SFST Program
- Validation of SFSTs

Unit 2: How are Police Officers Trained?

This unit provides a summary of the training that law enforcement officers receive.

Topics include:

- Introduction
- Summary of Training
- Periodic Updates

Unit 3: How does the Officer Make the Decision to Arrest?

This unit describes how an officer makes the decision to arrest including an overview of the 3 phases of detection.

Topics include:

- Introduction
- Three Phases of Detection
- Interpretation of Evidence
Unit 4: The SFST Battery

This unit has a description of the SFST battery, including administration of the tests and interpretation of the results.

Topics include:

- Introduction
- Horizontal Gaze Nystagmus
- Walk-and-Turn
- One-Leg Stand
- Other Tests
- Inconsistent BAC
- Questions to Ask the Officer

Unit 5: How Can I Learn More About SFSTs?

This unit provides information on how to learn more about the SFST program.

Topics include:

- Introduction
- Attending SFST Training
- National Traffic Law Center

OVERVIEW

• Course Description

The SFST Refresher Training Program is for law enforcement officers who have previously completed the National Highway Traffic Safety Administration and International Association of Chiefs of Police approved Standardized Field Sobriety Testing training. The purpose of the refresher training is to review the administration and interpretation of the SFST battery. The goal of the program is to improve the overall consistency of how the SFST test battery is administered by individual police officers.

The program allows officers to refresh their skills at recognizing and interpreting evidence of DWI; administering and interpreting the scientifically validated sobriety tests; and describing DWI evidence clearly and convincingly. The program provides a review of note-taking procedures and the trial preparation and testimony process. It also provides updated information regarding recent case law and research studies.

THIS PROGRAM IS INTENDED FOR THE PURPOSES OF REFRESHER TRAINING ONLY. THIS PROGRAM IS NOT A SUBSTITUTE FOR NHTSA/IACP APPROVED DWI DETECTION AND STANDARDIZED FIELD SOBRIETY TESTING TRAINING.

• How to Use this Manual

This manual is a complete guide to the SFST Refresher Training Program and how it is to be taught. It is organized into 6 units corresponding to the six units on the CD-ROM. Each unit consists of a cover page, an outline page, the lesson plans, and master (paper) copies of the visual aids ("slides") referenced in the lesson plans.

- The cover page presents the unit’s title and the total instructional time required to complete the unit.

- The outline page lists the content segments and the principal types of learning activities that take place during the unit.

- The lesson plans are arranged in a three-column format.

1. The left column contains the training aides (i.e., time frames and visual aides, etc.)

2. The center column contains the content (i.e., an outline of what is to be taught)

3. The right column contains Instructor Notes. These notes provide guidance concerning how the content is to be taught. For example, the instructor notes might include the approximate amount of time to be devoted to a particular topic and/or points requiring special emphasis.
• Note to Instructors

The Instructor's Lesson Plans Manual is designed to prepare you to teach the SFST Refresher Training Program. You should review the entire set of lesson plans to become familiar with the content and develop a clear understanding of the course flow. Instructors are expected to gather and be prepared to operate any equipment necessary (i.e., projection screen, computer with PowerPoint software, VCR). You should also have all student manuals and handouts (i.e., pretest and final test) prepared before class begins.

The Instructor's Lesson Plans Manual is a tool to help you maintain the sequence and pace of presentations and other learning activities. This manual is not a script and should not be read verbatim to the students.

| ![Image](image1) | **Introduction (continued)**  
1. Recognize and interpret evidence of DWI violations.  
2. Administer and interpret standardized field sobriety tests.  
Explain the purpose of this program. |
| ![Image](image2) | **Introduction (continued)**  
1. The objectives of this program include:  
   - Review the administration and interpretation of the SFST battery  
   - Review notetaking procedures  
   - Review the trial preparation and testimony process  
   - Provide updated information on the SFST program and related case law | Display slide.  
Go over the course objectives. |
| ![Image](image3) | **Origin of Training**  
1. Research began in 1975 to test the validity of field sobriety testing  
2. Results indicated that, when administered in a standardized fashion, the SFSTs are accurate indicators of impairment.  
3. In 1984, a training program was developed by NHTSA, in cooperation with IACP, to better prepare police officers to administer and interpret SFSTs | Display slide. |

| Display Slide 5 | - IACP Standards for the SFST Program  
  1. IACP adopted several standards specifying the requirement for selection and training of SFST practitioners and SFST instructors  
     - Criteria which must be met prior to completion of the program  
     - Knowledge and skills necessary for an individual to be considered for the program  
  - Pretest |
| 10 Minutes | - Purpose of Pretest  
  1. Distribute pretests.  
  2. Collect completed pretests. | Refer students to the IACP Standards in their Student Manual. Discuss the standards. (See Attachment A)  
  Explain that the purpose of the pretest is to provide a basis for evaluating students’ knowledge gain during the training.  
  There is a copy of the pretest in each student’s manual. You may also choose to copy the pretest from the attachment and distribute. Allow students approximately 10 minutes to complete the pretest and collect. |

ATTACHMENT A

IACP STANDARDS

1. A person shall be employed and under the direct control of a public criminal justice agency or institution involved in providing training services to law enforcement agencies.

2. SFST students shall successfully complete an approved classroom training course that shall, at a minimum, achieve the learning objectives as stated in the IACP-approved training curriculum.

3. Only persons who have successfully completed the NHTSA/IACP-approved DWI Detection and Standardized Field Sobriety Testing basic training program are eligible to be SFST instructors.

4. Instructor trainers must have successfully completed the SFST Basic School and the SFST Instructor Development School or an equivalent approved instructor development training course. They must be thoroughly familiar with the SFST student and instructor manuals.

Display slide.

This unit will cover the first two phases of Standardized Field Sobriety Testing. Phase 1, Vehicle in Motion, covers the officer’s initial observations of vehicular operation, the decision to stop, and observation of the stop. Phase 2, Personal Contact, covers the face-to-face observation and interview of the driver while still in the vehicle and the decision to instruct the driver to exit the vehicle. This unit also describes how officers can use the Standard Note-Taking Guide to document important evidence collected during Phase 1 and Phase 2.

UNIT 2: PHASE 3: PRE-ARREST SCREENING

1 Hour & 25 Minutes

Display slide 26

- Unit 2: Phase 3: Pre-Arrest Screening
  1. Introduction
  2. Horizontal Gaze Nystagmus (HGN)
  3. Divided Attention Test

- Introduction
  1. Two types of SFSTs:
     - Horizontal Gaze Nystagmus Test
     - Divided Attention Tests
  2. Only valid when administered in a standardized manner
  3. Standards must be maintained in order for their results to be used
  4. Officers should not deviate from the administration instructions

Display slide.

This unit covers the pre-arrest screening phase of standardized field sobriety testing, in particular, two types of tests are described: the Horizontal Gaze Nystagmus test and two divided attention tests. Keep in mind that these tests are only valid when administered in a standardized manner. Rigid criteria were used to validate the SFSTs. These criteria must be met each time a test is administered in order for the results to be admissible in a court of law. Therefore, the officer should not deviate from the administration instructions, doing so can weaken the case against the suspect.

### Instructor Notes

- Display slide.

  Emphasize to the students that officer safety is always a primary concern. To protect themselves, officers should:
  Avoid being in close proximity to the suspect if threats are sensed or real; never have their back to the suspect; and angle their weapon side away from the suspect.

- Display slide.

- Display slide.

  Demonstrate the position of the suspect.

</tr>
</tbody>
</table>
Aides  |  Lesson Plan  |  Instructor Notes
---|---|---
- Move the stimulus slowly to the right
- Hold the stimulus at the angle of onset
- Determine if less than 45°
- Check the right eye
- Move the stimulus slowly to the left
- Repeat at least once.

HGN Reliability

Display slide 40

- Vertical Gaze Nystagmus

1. The Vertical Gaze Nystagmus test is easy to administer.

  - Position the stimulus horizontally, approximately 12-15 inches (30-38 cm) in front of the subject's nose.

  - Instruct the subject to hold the head still, and follow the stimulus with the eyes only.

Point out that if the officer starts the stimulus directly in front of the suspect's nose, it will reach approximately 45 degrees when it is lined up with or slightly beyond the edge of the suspect's shoulder. Some white will usually be visible in the corner of the suspect's eye. This clue can only be counted if nystagmus begins prior to 45 degrees.

Display slide.

When the suspect exhibits at least four clues, this indicates, with a high degree of accuracy, that their blood alcohol level is above 0.10%. (New studies reflect 0.08 reliability.)

Point out that vertical nystagmus was not examined in the original research that led to the validation of the Standardized Field Sobriety Test battery (Horizontal Gaze Nystagmus, Walk-and-Turn and One-Leg Stand).

| Display slide 45 | **Walk-and-Turn - Administration**
Instructions Stage - the suspect is told to:
1. Assume a heel-to-toe stance - left foot on the line, right foot in front, heel-to-toe.
2. Place arms down at sides.
3. Do not start walking until told to do so.
4. Do you understand?
| Display slide.|

| Display slide 46 and play video | **Walk-and-Turn - Administration (continued)**
Walking Stage:
1. Take nine heel-to-toe steps down the line
2. Turn in a prescribed manner
3. Take nine heel-to-toe steps back down the line
To perform the turn:
1. On the ninth step, keep your front foot on the line and turn by taking several small steps with the other foot
2. Do you understand?
Final verbal instructions:
1. Keep watching feet
2. Arms at sides
3. Count steps out loud
4. Don't stop walking until test is complete
5. Do you understand? | Explain that the Walk and Turn test is administered in two stages. The first stage is the Instructions Stage.
Demonstrate the position of the suspect.
Display slide.
The second stage is the Walking Stage. Go over the administration of the test and play the video clip.
The officer should repeat any part of the instructions that the suspect does not understand.
- Walk-and-Turn - Interpretation

Clues of Impairment:

1. Can't maintain balance during the Instructions
2. Starts too soon
3. Stops while walking
4. Misses heel-to-toe ½ inch or more between steps
5. Steps off the line
6. Raises arms six inches or more
7. Turns improperly
8. Takes the wrong number of steps

- Walk-and-Turn - Interpretation (continued)

The officer may terminate the test at any time:

1. For the suspect’s safety
2. If the suspect steps off the line three or more times,
3. Nearly falls at any time, or
4. Experiences "leg lock".

If the suspect cannot do the test, the officer should record observed clue(s) and document the reason for not completing the test.

Two or more indicates with 68% accuracy that the suspect has a BAC > 0.10.

Display slide.

Display slide.

Demonstrate "leg lock".

  2. Use clear language
  3. Ensure evidence is presented convincingly in court
  4. Use words that convey powerful mental images

- **Note-Taking Guide**

Display slide 69

- **Activity**

Display slide 70 and play video

Instructor Notes

Display slide.

Explain that using descriptive words can convey powerful mental images, such as "swerving" and "drifting" to describe vehicle action. Vague words such as "abnormal" and "erratic" are subjective and non-descriptive.

Give some examples of well-written notes (students can also find examples in their Student Manuals).

Display slide.

Emphasize the importance of using the DWI Investigation Field Notes form and writing a clear description of the events. Have the students turn to the form in their Student Manuals and go over the sections. Remind the students that it is critical that the officer conveys how the suspect performed on the tests and exactly what the suspect did. (See Attachment A)

Explain that you are about to show a video clip of an impaired driver. The students should watch the clip and be able to describe the event using clear, descriptive language. Play the video clip.

4. Available to prosecutors, law enforcement, and judges
5. For more information, call the NTLC at (703) 549-4253.

- **Validation Research**

Display slide.

Go over some of the court cases relevant to the admissibility of HGN. (See Attachment A).

Ref. Homan Case (See Ohio vs. Schmitt, ST.3d 79 2004) officers are not precluded from testifying to observations.

Display slide.

Describe the resources available through the NTLC. Refer students to the contact information in their Student Manual.
- Validation Research

1. Officers are trained in the administration of SFSTs and use the tests successfully to help them identify impaired drivers.
2. Defense attorneys often challenge the validity and reliability of the test results.
3. Several validation research studies have been conducted to determine the credibility of the SFST battery.

Display slide.

- Validation Research (continued)

Studies include:

1. Colorado Validation Study of the Standardized Field Sobriety Test (SFST) Battery - November 1995
2. Florida Validation Study of the Standardized Field Sobriety Test (SFST) Battery - 1997
3. Validation of the Standardized Field Sobriety Test Battery at BACs Below 0.10 Percent (NHTSA Study) - August 1998

Display slide.

The Four and Eight Hour Drug Modules

5 Minutes

Display slide

- The Four and Eight Hour Drug Modules

1. "Introduction to Drugged Driving" - 4 hours
2. "Drugs that Impair Driving" - 8 hours

Display slide.

Inform the students that there are two additional training programs that are available for police officers.
Aides | Lesson Plan | Instructor Notes
--- | --- | ---

3. Designed to help law enforcement officers become more proficient at:
   - detecting
   - apprehending
   - testing
   - convicting

- **Drug Evaluation and Classification Program**

  1. Drug Evaluation and Classification program consists of:
     - a 2-day pre-school
     - 7 days of classroom training, and
     - field certification training

  2. Data suggests that many DWI violators are under the influence of drugs other than alcohol

  3. Officers will be able to recognize when a suspect may be drug-impaired

  **DEC Program (continued)**

  1. DEC program helps prevent crashes, deaths and injuries by improving enforcement of impaired driving violations

  2. Being able to identify additional cues to drug-impairment can provide probable cause for chemical tests in the event of an inconsistent BAC

  3. In order to qualify as a DRE, all IACP certification standards must be met

Display slide.

Point out that the Drug Evaluation and Classification program is designed to be the first step toward qualifying an officer to serve as a drug recognition expert, or DRE.

Display slide.

Tell the students that if they are interested in learning more about DEC training opportunities, they should contact their Governors' Highway Safety Representative, their local NHTSA Regional Office, or go to the NHTSA website (refer them to their Student Manuals for locations, phone numbers, and web address).

ATTACHMENT A

SUMMARIES OF RELEVANT CASE LAWS

- **State v. Superior Court, 718 P.2d 171 (Ariz.1986)**

  This case is also known as the "Blake" case. It was the first case to reach the State Supreme Court level. The Arizona Supreme Court found that HGN satisfies the Frye standards for evidence to corroborate or attach the issue of a suspect’s impairment. Because the court took judicial notice of HGN, it is not necessary to introduce expert scientific testimony to secure the admissibility of HGN. The court also set the standards governing the training of officers who would be qualified to testify about HGN. The court explicitly found that HGN cannot be used to establish BAC quantitatively in the absence of a chemical test. In this case, the arresting officer was attempting to use the angle of onset of nystagmus to give a quantitative estimate of BAC. The California court ruled that the officer was not entitled to testify as either a lay or expert witness about HGN, or to give his opinion about the defendant's BAC. The Court stated that, at the time, HGN was a new form of scientific evidence that had not yet shown its general acceptance in the scientific community. The officer's testimony in this case clearly demonstrated that he was not properly trained in HGN and didn't really understand how the test should be administered.

  In this case, the arresting officer was attempting to use the angle of onset of nystagmus to give a quantitative estimate of BAC. The California court held that the officer was not entitled to testify as either a lay or expert witness about HGN, or to give his opinion about the defendant's BAC. The court stated that, at the time, HGN was a new form of scientific evidence that had not yet shown its general acceptance in the scientific community. The officer's testimony in this case clearly demonstrated that he was not properly trained in HGN and didn't really understand how the test should be administered.

- **Iowa v. Murphy, 451 N.W.2d 154 (1990)**

  While this case also ruled that HGN test results could not be used to determine a specific BAC level, it did rule that the results of the test could be admitted into evidence because it was part of the SFST battery and the observations of impairment were objective in nature. The court also noted that the officer was properly trained to administer the test and that there was no need for the officer to be specially qualified to be able to interpret the results.

The Ohio Supreme Court ruled that, while field sobriety tests are an effective means of identifying intoxicated drivers, their reliability depends largely upon the manner in which they are administered. The court held that even minor deviations from the standardized procedures promulgated by NHTSA could severely bias the results. Thus, SFSTs, including HGN, must be administered in strict compliance with those procedures, or the results are inadmissible.

• **Young v. City of Brookhaven, 693 So.2d 1355 (Miss. 1997)**

The Mississippi Supreme Court held that although HGN is admissible to establish probable cause to arrest, it is not admissible at trial to prove the guilt or innocence of the defendant. This is contrary to the vast majority of cases that have addressed the issue. Most states that allow the admission of HGN evidence allow it to establish both probable cause to arrest and guilt or innocence.

• **Smith v Wyoming, 2000 Wyo. LEXIS 202 (Wyo October 4, 2000)**

For the purpose of establishing probable cause, an officer may testify to the results of the SFSTs (including HGN) if it is shown that the officer has been adequately trained, and conducted them (SFSTs) in substantial accordance with that training. Deficiencies in the administration of the SFSTs go to the weight accorded the evidence and not to its admissibility.
ATTACHMENT B

SUMMARIES OF VALIDATION RESEARCH

• **Colorado Validation Study of the Standardized Field Sobriety Test (SFST) Battery - November 1995**

This study researched the question, "How accurate are the officer's arrest and release decisions when the SFSTs are used by trained and experienced officers?" Using the standardized test battery described in this course, the researchers found that officers were more likely to error on the side of releasing drivers than on the side of incorrectly arresting drivers. Researchers concluded that the SFSTs are valid indices of the presence of alcohol at impairing levels.

• **Florida Validation Study of the Standardized Field Sobriety Test (SFST) Battery - 1997**

This study was conducted in response to vigorous legal challenges to the validity of the SFST battery and to update the relevancy of the research to the current use of the tests. The data obtained during this study demonstrated that 95% of the officer's decisions to arrest the driver were correct. Furthermore, 82% of their decisions to release drivers were also correct. Therefore, it was concluded that the SFSTs not only assist law enforcement officers in removing impaired drivers from the roadways, they also protect the rights of the unimpaired driver.

• **Validation of the Standardized Field Sobriety Test Battery at BACs Below 0.10 Percent (NHTSA Study) - August 1998**

The purpose of this study was to evaluate the accuracy of the Standardized Field Sobriety Test (SFST) battery to assist officers in making arrest decisions for DWI at BACs below 0.10. Data analysis found the SFSTs to be extremely accurate in discriminating between BACs above and below 0.08.

SFST Refresher Training Final Test
APPENDICES

A. Glossary
B. Overview for Prosecutors Program
C. State Offices of Highway Safety
D. NHTSA Regional Offices
GLOSSARY

Alveolar Breath - Breath from the deepest part of the lung.

Blood Alcohol Concentration (BAC) - Grams of alcohol found in 100 milliliters of blood.

Breath Alcohol Concentration (BrAC) - Grams of alcohol found in 210 liters of breath.

Clue - Something that leads to the solution of a problem.

Cue - A reminder or prompting as a signal to do something. A suggestion or a hint.

Divided Attention Test - A test that requires the subject to concentrate on both mental and physical tasks at the same time.

DWI - Driving While Intoxicated. (Also Driving While Impaired) Driving a vehicle while under the influence of alcohol or other drugs.

DWI Detection Process - The entire process of identifying and gathering evidence to determine whether or not a suspect should be arrested for a DWI violation. The DWI detection process has three phases:
   Phase 1 -- Vehicle in Motion,
   Phase 2 -- Personal Contact,
   Phase 3 -- Pre-arrest Screening

Evidence - A means by which an alleged fact may either be established or disproved. Evidence of a DWI violation may be of various types:
   1. Physical (or real) evidence: something tangible, visible, or audible.
   2. Well established facts (judicial notice)
   3. Demonstrative evidence: demonstrations performed in a courtroom
   4. Written matter or documentation
   5. Testimony

Field Sobriety Test - Any one of several roadside tests that can be used to determine whether a suspect is impaired.

Horizontal Gaze Nystagmus (HGN) - A standardized field sobriety test based on the involuntary jerking of the eyes as they gaze toward the side.

Illegal Per Se - Unlawful in and of itself. Used to describe a law that makes it illegal to drive while having a statutorily prohibited Blood Alcohol Concentration.

Nystagmus - An involuntary jerking of the eyes.
One-leg Stand (OLS) - A standardized divided attention field sobriety test.

Personal Contact - The second phase in the DWI detection process. In this phase the officer observes and interviews the driver face to face; determines whether to ask the driver to step from the vehicle; and observes the driver’s exit and walk from the vehicle.

Pre-Arrest Screening - The third phase in the DWI detection process. In this phase the officer administers standardized field sobriety tests to determine whether there is probable cause to arrest the driver for DWI, and administers or arranges for a preliminary breath test.

Preliminary Breath Test (PBT) - A pre-arrest breath test administered during investigation of a possible DWI violation to obtain an indication of the person’s blood alcohol concentration.

Psychophysical “Mind body” - Used to describe field sobriety tests that measure a person’s ability to perform both mental and physical tasks at the same time.

Standardized Field Sobriety Test Battery - A battery of three tests, Horizontal Gaze Nystagmus, Walk-and-Turn, and One-Leg Stand, administered and evaluated in a standardized manner to obtain validated indicators of impairment based on NHTSA research.

Tidal Breath - Breath from the upper part of the lungs and mouth.

Vehicle in Motion - The first phase in the DWI detection process. In this phase the officer observes the vehicle in operation, determines whether to stop the vehicle, and observes the stopping sequence.

Vertical Gaze Nystagmus - An up and down jerking of the eyes which occurs when the eyes gaze upward at maximum elevation.

Walk-and-Turn (WAT) - A standardized divided attention field sobriety test.
APPENDIX B

OVERVIEW FOR PROSECUTORS
(CD-ROM only)

The SFST Overview for Prosecutors is designed for prosecutors who want to become more familiar with SFST. The program also gives prosecutors a better understanding of how law enforcement officers are trained to carry out the laws that pertain to DWI. This program is accessed by installing the SFST Refresher Training CD-ROM and selecting Overview for Prosecutors when the startup routine prompts the user to select a program.

The program includes an introduction and five units.

Unit 1: What is the SFST Program and How did it Originate?

This unit provides some background information and describes the purpose of the SFST program.

Topics include:

- Introduction
- Development of SFST Program
- Validation of SFSTs

Unit 2: How are Police Officers Trained?

This unit provides a summary of the training that law enforcement officers receive.

Topics include:

- Introduction
- Summary of Training
- Periodic Updates

Unit 3: How does the Officer Make the Decision to Arrest?

This unit describes how an officer makes the decision to arrest including an overview of the 3 phases of detection.

Topics include:

- Introduction
- Three Phases of Detection
- Interpretation of Evidence
Unit 4: The SFST Battery

This unit has a description of the SFST battery, including administration of the tests and interpretation of the results.

Topics include:

- Introduction
- Horizontal Gaze Nystagmus
- Walk-and-Turn
- One-Leg Stand
- Other Tests
- Inconsistent BAC
- Questions to Ask the Officer

Unit 5: How Can I Learn More About SFSTs?

This unit provides information on how to learn more about the SFST program.

Topics include:

- Introduction
- Attending SFST Training
- National Traffic Law Center
