THC by LCMSMS
Uncertainty of Measurement Summary Budget

| Source of Uncertainty | Description Type A or B |  |  | Probability Distribution | Divisor | $\mathrm{c}_{\mathrm{i}}$ | $\mathbf{u}_{\mathrm{i}}( \pm)$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Reproducibility $\mathrm{u}(\mathrm{r})$ | Experimental uncertainty arising from random effects measured from reproducibility of LCMSMS THC controls (3 levels); pooled relative standard deviations | Type A | 0.0572 | Normal ( $\mathrm{n}=1218$ ) | 1 | 1 | 0.0572 |
| Linear Least-Squares Regression u(cur) | Linear regression for Least Squares calibration curve results from pooled whole blood replicates $5.0 \mathrm{ng} / \mathrm{mL}$ from bias evaluation ( $n=30$ ) analyzed under repeatability conditions on three instruments | Type A | 0.0363 | Normal ( $\mathrm{n}=30$ ) | 1 | 1 | 0.0363 |
| Systematic Error Recovery $u\left(\mathbf{R}_{m}\right)$ | Uncertainty associated with the evaluation of systematic error using bias evaluation replicate (5.0 $\mathrm{ng} / \mathrm{mL}$ ) data ( $\mathrm{n}=30$ ) | Type A | 0.0340 | Normal ( $\mathrm{n}=30$ ) | 1 | 1 | 0.0340 |
| Reference Materials u(Ctl) | Working control standard preparation; accounting for certified concentration of CRM, pipeting of CRM, density tolerance of MeOH , total volume, flask tolerance and repeatability | Type B | 0.0222 | Normal | 1 | 1 | 0.0222 |
| Reference Materials $u(\mathrm{Cal})$ | Working standard preparation; accounting for certified concentration of CRM, pipeting of CRM, density tolerance of MeOH , total volume, flask tolerance and repeatability | Type B | 0.0222 | Normal | 1 | 1 | 0.0222 |
| Certified Reference <br> Materials u(CRM) | Manufacturer uncertainty for THC CRM reported at 95.45\% level k=2 | Type B | 0.0500 | Normal | 2 | 1 | 0.0250 |
| Sample Preparation $u(S P)$ | Pipette precision (maximum allowable imprecision) | Type B | 0.0200 | Rectangular | $\sqrt{ } 3$ | 1 | 0.0115 |
|  | *RSD ${ }_{\text {Pooled }}$ | 0.0572 |  |  |  |  |  |

$$
R S D_{\text {pooled }}=\sqrt{ }\left\{\left[\left(n_{1}-1\right) \times\left(R S D_{1}\right)^{2}\right]+\left[\left(n_{2}-1\right) \times\left(R S D_{2}\right)^{2}\right]+\left[\left(n_{3}-1\right) \times\left(R S D_{3}\right)^{2}\right]\right\} \div\left[\left(n_{1}+n_{2}+n_{3}\right)-3\right]
$$

| (\%) |  |  |
| ---: | :---: | :--- |
| Combined Standard Uncertainty ( $\left.\mathrm{u}_{\text {comb }}\right)$ | $8.65 \%$ |  |
| Expanded Uncertainty (U) | $17.30 \%$ | $\mathrm{k}=2,95.4 \%$ Confidence Level |
| Expanded Uncertainty (U) | $25.96 \%$ | $\mathrm{k}=3,99.7 \%$ Confidence Level |

$$
\begin{aligned}
& u_{\text {comb }}=\sqrt{ } u(r)^{2}+u(\text { cur })^{2}+u\left(R_{m}\right)^{2}+u(C R M)^{2}+u(C t l)^{2}+u(C a l)^{2}+u(S P)^{2} \\
& U=u_{\text {comb }} \times k
\end{aligned}
$$
